GET THE WORLD'S BEST AND BRIGHTEST TO INDIA

► Allow top-ranked foreign universities to set up independent campuses in India under a well-defined regulatory framework to ensure quality and transparency. This will give Indian students access to globally benchmarked education without going abroad, making elite learning more accessible. It will also encourage healthy competition, raise academic standards, and foster global research collaborations. Integrating global best practices could drive innovation, attract international faculty, and position the country as an education hub.

INDIAN UNIVERSITY IN THE TOP 100

► Use the global university rankings as a benchmark for funding, reform, and policy support. Develop targeted programmes to improve research output, strengthen faculty training, and incentivise international collaborations. Provide grants for infrastructure, innovation, and interdisciplinary work that align with ranking criteria. The ultimate aim is to bring an Indian institution into the global top 100.

MAKE SPORTS EVERY SCHOOL'S PRIORITY

► Make sports and physical education a compulsory part of the school curriculum to promote holistic development and mental well-being. Integrate sports into academic assessments to reduce stress and encourage participation. Allocate dedicated budgets for sports infrastructure in every school. Early exposure not only improves health but also helps identify and nurture athletic talent.

PROVIDE TWO MEALS PER CHILD

► Upgrade the Midday Meal Scheme to provide two nutritious meals daily—an early breakfast and lunch—for all schoolchildren. This is critical to reduce malnutrition, boost learning outcomes, and increase attendance, especially among underprivileged children. Implement uniform quality standards across states, backed by vigorous monitoring. Special focus must be placed on hygiene, safe kitchens, and functional sanitation facilities, particularly girls' toilets, to create a healthy school environment.
