INVITE PRIVATE CAPITAL IN UNIVERSITIES

► India must diversify funding for higher education by actively promoting private sector participation. This includes encouraging endowments, industry-sponsored scholarships, and market-linked tuition models. Inspired by global models like the US and China's "1,000 Talents" initiative, India can attract global talent, boost research, and improve institutional competitiveness. Government spending should prioritise need-based aid to ensure inclusivity.

DIGITISE AND DIVERSIFY SCHOOL CURRICULA

► Modernise school curricula by integrating multilingual, inclusive content with 21st-century pedagogy. Leverage digital tools such as smart classrooms, interactive content, and AI-driven assessments to personalise learning and improve outcomes. Prioritise accessibility by making educational material available across platforms and in local languages to bridge divides. Equip teachers with skills needed to effectively use technology.

STRENGTHEN THE NTA FOR ZERO LEAK TESTS

► Empower the National Testing Agency (NTA) with statutory authority and dedicated funding to ensure secure, tech-enabled, and transparent examinations across India. As high-stakes exams increasingly face leaks and malpractice, India needs robust digital infrastructure with AI-driven surveillance, encrypted question banks, and real-time audits. Strengthening the NTA will standardise testing procedures, reduce paper-based vulnerabilities, and restore public trust.
