CREATE DISTRICT INFRASTRUCTURE INDEX

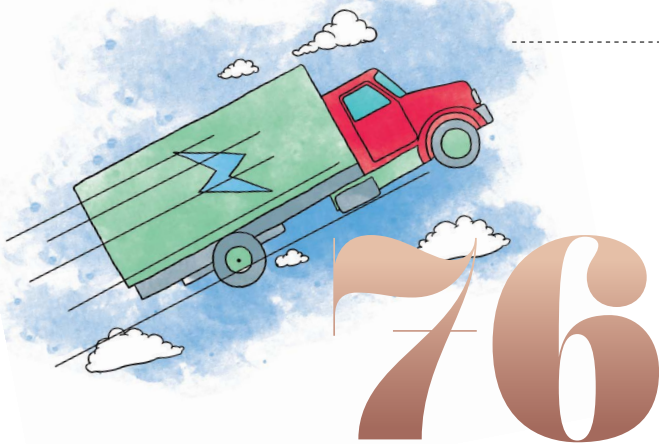

► Build a dashboard for infrastructure projects with timelines and gaps at the district level that is publicly viewable. This will act as a benchmark for formulating and implementing various policies of the government and ensure equitable development across districts. It can focus on parameters such as health, education, transport, civic amenities, roads and water, among others. There is also a need for a district-level digital infra census with a public inventory of India's fibre, towers and edge data centre facilities.

75

BUILD WORLD CLASS PORTS

► About 95% of India's trade by volume and 65% by value moves through maritime transport. The Indian Ports Bill, 2025, seeks to integrate port development and establish adjudicatory mechanisms. There is still a need to address congestion, ensure standardisation of documentation and paperwork, and ease regulatory clearances to avoid detention and demurrage. Focus should be on integration with international stakeholders and efficient data exchange.

47

GREEN FREIGHT POLICY

► In freight, India's dedicated freight corridors and the Unified Logistics Interface Platform already signal a shift towards coordinated, digitised logistics. Further progress in multimodal logistics hubs and green freight practices, like those adopted in the European Union's Green Freight Programme, could improve efficiency and reduce carbon intensity. Government support is required for faster adoption of electric and hybrid heavy duty trucks on the lines of FAME, the central government's flagship electrification policy.

SINGLE-WINDOW AUTO CLEARANCES

► There is a pressing need for a centralised system where all necessary permits and certifications for a vehicle—related to its manufacturing, environmental impact (emissions) and safety features—can be processed. Instead of a vehicle manufacturer or an individual having to go to multiple departments or agencies to get separate approvals, the single-window platform would allow them to submit all required documents and apply for all clearances through one integrated system.
