## BUILD INTEGRATED MULTIMODAL TRANSPORT SYSTEM

► Focus on a more integrated, efficient, automated and sustainable transport ecosystem. This could include continued expansion of metro systems, bus rapid transit corridors, and suburban rail, supplemented by electric and shared mobility options for last-mile connectivity. India can look at examples like Singapore, which has successfully implemented integrated multimodal transport systems.

## MAKE INDIA AN AVIATION HUB

► India's aviation market is growing by leaps and bounds. The focus should be on making it an aviation hub like Dubai, Doha and Singapore. That would require digitisation of airport services for a smooth travel experience, relaxation of transit visa norms, ramping up hotel and allied airport services, improving infrastructure and skilling the workforce. Reforms are needed to build world-class maintenance, repair and operations facilities for aircraft and an independent aviation regulator.

## COMPREHENSIVE INFRA RATING

► Introduce a rating framework for infrastructure projects through the lifecycle of the project. Ensure that the onus of maintaining the quality of the project lies with the developers. The rating system can be on the lines of those available for companies and should impact fund-raising capacity. At present, there is a rating system that looks at project viability and returns during the lifecycle, but this misses out on quality assurance and accountability of construction players across sectors.
