

KONE: Elevating Smart Technology for Sustainability and Safe Living Spaces

KONE Elevators India is driven by research, innovation, and intuitive technology to create safe, efficient spaces in cities that are rapidly growing vertically. With over 3,000 patents related to elevators and escalators globally, KONE supports urbanization through sustainable solutions that enhance the movement experience of 2 billion people every day across urban environments.

Managing Director, India and South Asia
KONE Elevators

A Signature Name

With a deep understanding of the everyday challenges faced by people using high-rise spaces like multi-story buildings or expansive hubs such as airports, KONE brings an innovative, human-centric approach to connectivity. A truly global and forward-looking organization, KONE combines cutting-edge technology with consumer focus to transform cities into better places to live and work. Guided by its pillars of urbanization, technological disruption, and sustainable modernization, KONE is investing heavily in India. Its test tower in Chennai, inaugurated in 2023, along with world-class Research & Development centers, are redefining the urban lifestyle. These facilities focus on innovative design embedded with AI-driven features that set KONE apart. Notably, KONE installed the world's largest passenger elevator at the Jio World Centre in Mumbai, India.

A New Strategy for a Changing World

In response to the evolving needs of cities, customers, and the planet, KONE introduced a bold new global strategy 'Rise'. The strategy focuses on growth through four transformative shifts

that guide all business decisions and innovation pipelines— **Accelerate Digital:** harnessing data, connectivity, and automation to drive intelligent services and experiences. **Drive Modernization:** addressing the aging equipment base in cities by offering future-ready upgrades that improve safety, accessibility, and sustainability. **Win Residential:** strengthening KONE's presence in the residential segment by offering tailored, affordable, and easily maintainable solutions. **Cut Carbon:** reducing the carbon footprint of products, operations, and the entire value chain by integrating sustainability into every layer.

This strategy is not only a vision for the future, but also an action plan that directly responds to megatrends shaping the urban world, from climate urgency to digital acceleration and shifting demographics.

Forging Technology Partnerships

Technology is becoming inseparable from modern life, especially in rapidly urbanizing cities. Elevators, buildings, vehicles, and even appliances generate massive amounts of data through embedded sensors. To process and derive insights from this data, KONE collaborates with leading technology partners.

Our key partnerships with many companies like Amazon Web Services, Infosys and ITC Infotech on various software, IoT and AI plays a significant role in technological enhancements.

KONE's advanced People Flow™ solutions include access and destination control systems. To ensure uptime and proactive maintenance, KONE offers AI-based analytics across equipment from any manufacturer. KONE 24/7 Connected Services, a cloud-based solution, uses sensors to monitor performance in real time and identify issues before they cause disruptions, enabling predictive maintenance and extending equipment life.

Smart Energy Saver

KONE's portfolio includes elevator and escalator

models with top-tier energy efficiency ratings. Its innovations like regenerative drive systems and KONE UltraRope® technology dramatically reduce energy consumption.

The regenerative drive can recover up to 35–40% of an elevator's energy consumption and return it to the building's power system.

KONE UltraRope®, a carbon-fiber-based hoisting technology, can cut energy consumption by up to 15% for a 500-meter elevator journey compared to traditional steel ropes.

KONE's test towers include multiple shafts to test high-speed, mid, and high-rise solutions. Solar panels installed on rooftops further reduce energy dependence, reflecting a holistic approach to sustainable design and aligned with KONE's ambition to Cut Carbon.

Sustainability in Every Step

KONE works closely with stakeholders to shape future-ready, energy-efficient cities. Its sustainability strategy touches every part of its operations—from designing energy-saving solutions and reducing material waste to increasing automation and using recyclable materials.

Up to 90% of materials in KONE elevators and escalators are recoverable. The company actively collaborates with suppliers to increase the recycled content in metals used. Robotics and automation are deployed to ensure high-quality production with minimal environmental impact.

Pledge for Carbon Neutrality

KONE supports customers on their net-zero journey with carbon-neutral KONE DX Class elevators and carbon-neutral DX maintenance services. KONE is committed to reducing greenhouse gas emissions from materials and energy use by 40% by 2030 and cutting operational emissions by 50% by 2030 (compared to a 2018 baseline).

These bold commitments align with KONE's strategic shift to Cut Carbon and reflect its ambition to shape a more sustainable urban future.
