Amazon's New Test

Amazon has entered the Indian diagnostics market, which could reach ₹3 lakh crore by 2030

BY NEETU CHANDRA SHARMA

► **THERE'S A NEW** player in town in the Indian diagnostics sector. Amazon India, in partnership with Orange Health Labs, has launched Amazon Diagnostics, a move that adds new competition in a market currently led by Dr. Lal PathLabs, Metropolis Healthcare, and Agilus Diagnostics.

The service is currently available across six cities—Bengaluru, Delhi, Gurugram, Noida, Mumbai, and Hyderabad—covering more than 450 PIN codes. Customers can choose from over 800 diagnostic tests, book home sample collection within 60 minutes, and access digital reports through the Amazon app, with some routine results delivered in as little as six hours.

Positioned as part of Amazon's wider healthcare push under Amazon Medical, the diagnostics service builds on Amazon Pharmacy and Amazon Clinic, aiming to offer

a connected outpatient experience. Features include real-time appointment slots, address validation, test preparation guidance, and secure report access through the Amazon Health dashboard.

According to a report by Research and Markets, India's diagnostic laboratories market was valued at ₹1.54 lakh crore in FY24 and is projected to reach ₹2.98 trillion by FY30, growing at a CAGR of 11.7% between FY25 and FY30. While organised players account for only 20–25% of this market, demand for home diagnostics has increased significantly since the pandemic.

Established chains have already begun adapting. Dr. Lal PathLabs operates more than 280 labs and 5,500 collection centres across India, while Agilus Diagnostics runs over 400 labs and around 4,000 centres, particularly in Tier II and Tier III towns. Both firms have invested in logistics and digital upgrades, but Amazon's tech-driven, on-demand model and customer reach could test their ability to retain market share.

"Amazon Diagnostics represents a step towards making healthcare more accessible," says Jayaramakrishnan Balasubramanian, Category Leader at Amazon Medical.

Dhruv Gupta, Co-founder of Orange Health Labs says they aim to provide faster, more reliable, and insight-led diagnostics across India.

"Amazon's entry will create more competition, but the scale of disruption depends on whether it builds a differentiated ecosystem or competes mainly on speed and cost," says Salil Kallianpur, a healthcare and pharmaceutical analyst. He points out that further expansion may require tackling local regulatory norms and forging infrastructure partnerships—potentially through acquisitions or tie-ups.

It will be interesting to track measures established players could take to retain their market share. **BT**
