

As Hyundai builds a long product pipeline, it is leaving no stone unturned to expand and reinforce its sales and service network, with strong emphasis on rural regions. "Today, our service network is as strong as the sales network. We have more than 1,600 service points in the country. Our rural network is now 47% of the total. We have deployed more than 100 mobile vans to service rural customers," says Garg. Nomura's Sharma says the rural market has considerable potential. "Institutional sales will further stabilise demand, contributing to volumes," he adds.

For FY26, Hyundai expects domestic growth to be broadly in line with industry estimates of low-single digits. It is aiming for 7-8% volume growth in exports. UBS, however, expects FY26 volumes to remain soft for the passenger vehicle industry and expects Hyundai to marginally underperform (1% volume growth vs. 2-3% for the industry). "However, we expect Hyundai Motor

GLOBALLY, HYUNDAI MOTOR CORPORATION HAS SIX EVs AND PLANS TO LAUNCH 21 MORE BY 2030

India to outperform in FY27 as new capacity comes onstream in H2 FY26 and launches gain momentum from Q4 FY26," it says.

Notably, as advanced technologies like ADAS (Advanced Driver Assistance System) gain traction in India, Hyundai is placing a strong emphasis on feature-rich offerings, including sunroofs, ADAS, and automatic variants. "We started with one ADAS model. Now we have eight. We can bring those global technologies to India because it is evolving at a very fast pace. For the Indian customer, aspiration is taking over functionality," says Garg. UBS expects the company to continue leading in technology adoption.

Hyundai Motor India benefits from access to global technologies. Unsoo Kim says Hyundai Motor Group is strategically enhancing India's role in global R&D and production network. "The country's engineering talent, growing market relevance and cost competitiveness make it an ideal hub for innovation and scale. Our vision is to further integrate India into Hyundai's global value chain, leveraging local insights,

product development capabilities and manufacturing excellence to respond effectively to dynamic market conditions worldwide," he says.

A recent note by research firm Asian Markets Securities says R&D achievements of the parent go a long way in making Hyundai a long-term bet. "While India, as a nation, will get ready for upcoming global technologies over the next decade, HMC (Hyundai Motor Corporation) Global seems well prepared," says the research agency.

FOCUS ON HYBRIDS

Hyundai's comeback plan includes rolling out hybrids as well in view of sluggish EV adoption. EV penetration in India is just around 3.7% despite a reduced 5% GST rate and availability of over 30 models. In comparison, the hybrid segment, with four-five models, accounts for 3% of the market.

Globally, Hyundai Motor Corporation plans to expand its hybrid electric vehicle portfolio from seven to 14 models by 2030, as part of the Hyundai
