

Hyundai Motor
India benefits
from access
to global
technologies,
thanks to its
position within
the Hyundai
Motor Group

15% **THE SHARE OF THE COMPACT SUV SEGMENT IN HYUNDAI INDIA PORTFOLIO**

Way strategy. The conglomerate plans to sell 1.33 million units of hybrid vehicles. “Globally, hybrids are doing well. Hyundai Motor Corporation has all the technologies. We believe India, being a big country, has an opportunity for all kinds of technologies. At Hyundai, we are not dependent on one technology. We feel all technologies will coexist. Since we have access to all these technologies, we should be the ones driving it,” says Garg.

In India, only Japanese giants Maruti Suzuki, Toyota Kirloskar Motors and Honda Motor Corporation have dipped their feet into hybrids. “Hybrids are likely to appeal to urban commuters and long-distance

travellers who need a combination of performance, fuel economy and range,” says Sharma.

Hyundai, despite launching Kona Electric early, has struggled in EVs. It is behind Tata Motors, JSW MG Motor India, Mahindra & Mahindra and BYD in EV sales. In FY25, Hyundai’s EV market share was a dismal 2.24%. The company is betting on the recently launched Creta Electric and the upcoming six models to turn around its EV fortunes. It is targeting 14% market share in EVs by 2030. “We are set to accelerate our presence in the EV market by building on the strong foundation laid in FY25 with Creta Electric. This model has received an encouraging response from customers,” says Unsoo Kim. Hyundai is also localising the EV ecosystem— from battery pack assembly and upcoming LFP (lithium iron phosphate battery) cell production to power electronics and drivetrain components, says Garg. It has reached 85% localisation.

With range anxiety and inadequate charging infrastructure emerging as key concerns for EV
