PROMOTERS' STAKE AS OF JUNE 2025 **SOURCE** ACE EQUITY

clical sectors, demand here is non-discretionary and rising—driven by an ageing population, increasing incidence of lifestyle diseases, and greater affordability through insurance. India is also a global leader in generics manufacturing and is now scaling up in R&D, digital health, and medical technology. These structural strengths make healthcare one of the most dependable long-term growth sectors for India,” says Dr. Harsh Mahajan, Chairman FICCI-Health & services & Founder Mahajan Imaging & Labs.

An analysis by Equirus Capital highlights steady growth in India's pharmaceutical and healthcare sectors between FY23 and FY25. Large integrated pharma companies saw revenue growth of about 11%, with operating margins reaching nearly 26% by FY25. The active pharmaceutical ingredients (API) segment demonstrated a strong recovery, with margins near 29%, reflecting capacity expansion and backward integration. Generic drugmakers faced pricing pressures in the US but maintained profitability through

cost controls and growing sales in emerging markets.

Hospitals posted revenue growth of 16%, driven by higher bed occupancy, improved case mix, and a 10% rise in average revenue per occupied bed. Expansion efforts included Apollo's ₹2,000 crore investment in Tier-II cities, Max Healthcare's ₹1,500 crore for new facilities, and Fortis' ₹800 crore for upgrades.

Investment activity has been high, with Equirus counting 39 deals in FY25. These included IPOs, block trades, qualified institutional placements, mergers, and PE funding, reflecting investor confidence. **BT**
