

The company has commissioned 200 MW of solar, 99 MW of wind and 218 MW of WHRS capacity.

Ambuja Cements highlights (Q1 of FY'26)

- Recorded highest quarterly sales of 18.4 MnT.
- Crossed quarterly revenue of Rs 10,000 crore.
- Commissioned 57 MW wind power, taking renewable energy capacity to 473 MW.
- Ranked "India's Most Trusted Cement Brand 2025" for 4th year in a row by TRA Research in its Brand Trust Report 2025.
- Recognised with the 'GEEF Global Emerging Environmental Excellence Company of the Year 2025' award in the cement industry category.
- Ambuja Cements was the lead cement supplier for the world's highest single-arch, Chenab railway bridge.

in renewable energy, digital optimisation, and low-carbon product innovation, Adani Cement is not only expanding its market share but also transforming how cement is produced and consumed in India.

Through calculated acquisitions and future-ready strategies, Adani Cement is charting a new chapter in India's infrastructure growth story—one rooted in scale, sustainability, and speed.

Scaling Sustainably: From 67 to 104 MTPA in 33 Months

Adani Cement's rapid growth is unprecedented in the sector. In just under three years, the company expanded from 67 million tonnes per annum (MTPA) to ~104.5 MTPA, with ambitions to reach 140 MTPA by financial year (FY) 2028. This growth spans across major project sites including Dahej, Marwar, Kalamboli, Sindri, and more. Each new facility integrates green technologies from the outset—proving that rapid growth can be sustainable too.

India's Only Cement Group with Net Zero Targets Validated by SBTi

Ambuja Cements and ACC are the only Indian cement companies—and among just four globally—to receive Science Based Targets initiative (SBTi) validation for both near-term and net-zero targets. Ambuja is also the first cement company worldwide to join IRENA's Alliance for

Industry Decarbonization (AFID), signaling its global leadership in climate action.

Among the World's Lowest Carbon Emitters

With carbon intensity targets of 421 kilogram (kg) carbon di-oxide (CO₂)/tonne (ACC) and 442 kg CO₂/tonne (Ambuja) by 2030, Adani Cement ranks among the lowest emitters globally. In comparison, the Indian cement industry averages 600–700 kg CO₂ per tonne—making Adani Cement a benchmark for emissions reduction.

₹10,000 Crore for Clean Energy: Toward 60% Green Power

The company is investing ₹10,000 crore in renewable energy infrastructure, aiming to meet 60% of its power needs through green sources by FY'28. The Company has commissioned 473 MW of Renewable Energy, as of now, taking its green power share to 28.1% out of its target of 60% by FY 2028—far exceeding industry norms.

AI and Industry 4.0: The Digital Backbone of Green Growth

From real-time emissions tracking through the Cement Network Operating Centre (CNOc) to AI-powered kiln optimisation and predictive analytics, Adani Cement is deploying advanced technologies to reduce its carbon footprint and enhance efficiency.

Green goals

Carbon intensity targets by 2030 (kg CO₂/tonne)

- 421 (ACC)
- 442 (Ambuja)

Indian cement industry average is 600-700 kg CO₂/tonne

Clean energy commissioned

- 200 MW solar
- 99 MW wind and
- 218 MW WHRS

60% power needs to be met through green sources by FY 2028

Waste Processed

- 20.88 million tonnes in FY 2025
 - Thermal Substitution Rate (TSR) - 9.7 %
- TSR goal - 28% by 2030

What is Science Based Targets initiative (SBTi)?

- It is a global body that helps organisations/companies set greenhouse gas (GHG) emission reduction targets.
- It ensures that a company's emission reduction targets are necessary to meet the Paris Agreement goal of limiting global warming to 1.5°C above pre-industrial levels.
- It chalks out path for companies to take initiatives that address climate change and align their strategies with latest scientific understanding.
- SBTi validation offers credibility and shows commitment to climate action.

Circular Economy in Action

20.88 Million Tonnes of Waste Processed: In FY'25 alone, the company processed over 20.88 million tonnes of waste-derived material—turning fly ash, slag, and even plastic into resources. Its Thermal Substitution Rate (TSR) reached 9.7 per cent, with a goal of 28 per cent by 2030.

Water Positivity and Ecological Restoration: Ambuja's 12x water positivity is backed by extensive rainwater harvesting infrastructure. Adani Cement has pledged to plant 8.3 million trees by 2030, contributing to the Adani Group's 100 million-trees target. Biodiversity zones around plant sites are attracting migratory birds, restoring ecological balance.

Greener Buildings Through Strategic Partnerships: Adani Cement's partnership with CREDAI gives real estate developers access to low-carbon materials like Ambuja Kawach, ECOMaxX, and Coolcrete. These products are GRIHA-certified and designed for high-performance, sustainable construction.

A Blueprint for India's Green Industrial Future

As India enters its most transformative era of infrastructure development, Adani Cement is setting the pace—not just in production, but in climate responsibility. By doubling capacity while halving emissions intensity, it's building a model where economic and environmental ambitions go hand in hand.

With scale, science, and sustainability at its core, Adani Cement is laying the foundations of a greener, stronger India.
