

our long-standing collaboration with Microsoft to develop new AI and Cloud solutions to equip customers for the future. We have also enhanced and augmented our own platforms with AI, enabling clients to innovate faster, automate at scale and drive measurable business outcomes with greater speed and efficiency. This blend of industry-leading partnerships, strategic future-readiness and targeted investments in infrastructure and talent has solidified TCS' position to lead and make bold bets for the future.

Q: Are rising costs becoming a challenge in the current global scenario?

A: The past few years have been marked by inflationary pressures, supply chain disruptions and global uncertainty. They have become a part of the everyday business landscape. Yet, we have maintained healthy margins and strong cash flows. This has been possible because of a disciplined focus on delivery and operational excellence. Delivering first-time-right is the best way to achieve strong margin performance.

Q: Can you elaborate a little on this point?

12 | A: We manage our delivery pyramid mix with precision, structuring teams in a way that maximises both customer delight and efficiency. Our location strategy, built around balancing onsite, offshore, and nearshore delivery, means we can stay close to our clients where needed, while benefiting from cost efficiencies across our Global Network Delivery Model.

The other part is our ability to anticipate skills of the future. By upskilling and reskilling our workforce in AI, Cloud, cybersecurity, and data analytics, we ensure that teams can pivot quickly to meet evolving client demands. This ensures we can respond to market changes in real time.

Q: How does a strong balance sheet set you up to put in place a more robust business model?

A: This financial strength enables us to accelerate capability building in high-growth areas such as AI, cloud, cybersecurity, and quantum, while also investing in infrastructure from data centres to AI platforms. It means we can deliver transformation at scale. For instance, we recently set up an innovation centre in Singapore, expanding our AI research and innovation footprint to 13 hubs globally. Through this we are helping clients speed up innovation cycles by giving them faster access to advanced capabilities and TCS'

expertise. In Latin America, we strengthened our presence with a new AI-driven operations centre in Mexico City, and in Europe, we expanded our software-defined vehicle innovation capabilities with three new hubs.

A strong balance sheet also allows us to transform business models without waiting for disruption. We can reimagine delivery models, enter new markets, and expand infrastructure from a position of strength.
