

Indian wellness wisdom is blended with advanced formulation science to create products that are both rooted in heritage and validated by modern nutrition standards. The center is staffed by a multidisciplinary team that includes Ayurvedic researchers, formulation scientists, nutritionists, flavour experts and analytical scientists.

From Ayurvedic ingredients like Tulsi, Turmeric, and Brahmi to scientifically validated nutrients such as soy isolate and other plant-based proteins, every product is thoughtfully designed for safety and effectiveness. Each batch undergoes a comprehensive seven-step testing protocol, from raw material verification to final packaging and even post-market surveillance. Herbalife's labs are equipped with highly sophisticated and analytical equipment like HPLC, GCMS, LCMS, ICP, HPTLC, and DNA sequencing. These tools allow for precise testing of purity, label accuracy, and ingredient integrity, ensuring that only the best-quality products reach consumers.

CORPORATE CITIZENSHIP

Herbalife India is not just in the business of selling nutrition products but also actively working to create healthier, more resilient communities. Through purpose-led partnerships with academic institutes like Indian Institute of Technology (Madras), and non-profit organizations like MEGA Foundation, Jaljeevika, Shishu Mandir, and SOS Children's Villages Herbalife supports a wide array of social development programs.

These initiatives include nutrition and care for parentless and abandoned children, skill development for women in aqua-agriculture, waterbody restoration in drought-prone villages, and education and sports scholarships for

underprivileged youth. The ECO Wheels initiative empowers over 115 women in Bengaluru with skills and livelihoods in electric auto operations, advancing both social and environmental impact. In partnership with IIT Madras, Herbalife supports 1,000 underprivileged students, half of them women, with scholarships for its BS Degree in Data Science and Applications.

In each of these areas, Herbalife's interventions are designed to drive positive change and economic upliftment. By empowering communities with knowledge, resources, and opportunities, the brand reinforces its belief that true wellness extends beyond the individual, but it must include the collective.

Governance at Herbalife is underscored by transparent practices, rigorous quality protocols,

and ethical supply chain management. By embedding ESG principles into its operations and community programs, Herbalife India continues to drive inclusive, responsible growth that benefits individuals, society, and the environment.

This people-centred approach has also helped Herbalife India build deep trust with consumers and communities alike. In an era where misinformation and health scepticism are rampant, the company's transparency in sourcing, testing, and formulation provides much-needed clarity. Its consistent investment in education, whether through wellness workshops, coach training programs, or community outreach, further strengthens its credibility as a trusted health partner.

A MODEL FOR RESPONSIBLE GROWTH

Herbalife India is partnering with IIT Madras to set up a Plant Cell Fermentation Technology Lab that is first-of-its-kind in sustainable Herbal biomanufacturing. This partnership will bridge traditional herbal wisdom with modern science, advancing India's vision of self-reliance and sustainability. The state-of-art lab will drive innovation and foster entrepreneurship, build industry capacity, and strengthen India's position as a global bio-manufacturing hub.

In the years ahead, Herbalife India aims to deepen its community impact and inspire more individuals to take control of their health, equip more entrepreneurs to drive change, and build a future where wellness is not a privilege but a way of life. From its research labs and manufacturing floors to its neighbourhood clubs and CSR projects, Herbalife India is building more than a nutrition brand; it is building a healthier, more empowered nation, one step, one person, and one community at a time.
