of Dixon Technologies

IN 1993, WHEN India began to shrug off the shackles of the Licence Raj, a fledgling manufacturing unit in Noida started assembling televisions. It would go on to script one of the most remarkable growth stories in India's electronics industry.

Three decades later, Dixon Technologies is no longer just a television assembler. It has become the country's leading electronics manufacturing services (EMS) player, with a sprawling presence across smartphones, appliances, telecom equipment, and now even electronic components. Its success is reflected in its financial performance. In FY25, the company's gross sales saw a YoY leap of 119.5% from ₹17,706 crore to ₹38,860 crore. Profit after tax saw shot up exponentially by 224% to ₹1,215 crore.

So, when Dixon made it to the BT500 list of most profitable companies, it wasn't a surprise. It epitomises the success of the Make in India story.

Dixon's strategy has always been consistent. "Our approach is to enter a category, capture 35-40% of the market, establish a strong lead over competition, and then drive operational excellence," says Atul Lall, Vice Chairman and MD of Dixon Technologies.

Diversification has helped Dixon not only weather sectoral cycles but also establish itself as an indispensable partner for global brands looking to manufacture in India.

BIG SMARTPHONE BET

If one category has defined Dixon's recent trajectory, it is smartphones. The company entered the space just seven years ago but now counts nearly every major Android brand among its clients. "From FY20 to FY23, our mobile business revenue was around ₹12,000 crore. In FY24, it rose to ₹18,000 crore. By FY25, it had more than doubled to ₹38,000 crore. We are confident of reaching ₹55,000 crore in FY26," says Lall.

Dixon Tech produced 28 million smartphones in FY25. The number is expected to reach 42 million in FY26.

The growth has been nothing short of staggering. Smartphones may be the headline story, but Dixon has been quietly planting seeds in other areas as well. A joint venture with Bharti Airtel to manufacture telecom equipment like routers, Wi-Fi devices, set-top boxes, and fixed wireless terminals has already scaled up into a ₹3,600-crore business.

According to Motilal Oswal Financial Services, Dixon is pursuing a two-pronged strategy: strengthening
