

relationships with existing clients through long-term joint ventures (JVs) and pushing backward integration into components.

Several partnerships reflect this approach. A ₹370-crore JV with HKC Overseas to make LCD and TFT-LCD modules, a tie-up with Qtech for camera modules, and another with Chongqing Yuhai Precision Manufacturing for precision components will allow Dixon to capture a larger share of the smartphone bill of materials. For clients, this means stickier partnerships, and for Dixon, higher profitability.

BUILDING SCALE

Today, Dixon operates 26 manufacturing facilities across Uttar Pradesh, Uttarakhand, Telangana, Punjab, and Tamil Nadu. Each unit is tailored to specific verticals.

36 | This geographic spread not only diversifies risk but also ensures Dixon is embedded in multiple state-level manufacturing ecosystems.

The company's long-term bet is clear: deepen its presence in the component ecosystem and gradually move up the value chain by developing intellectual property in certain categories. "Designing our own products is the natural next step," says Lall.

Despite its impressive growth, Dixon faces challenges. Manish Valecha, Research Analyst at Anand Rathi Institutional Equities, says while scaling up laptop and telecom networking segments can support Dixon's growth, higher US tariff structures compared to peer countries could hinder export competitiveness.

"Pursuing JVs with existing and new clients (versus traditional contract manufacturing) may drive sustained growth in a volatile, uncertain, complex, and ambiguous environment. However, delays in scaling up mobile component manufacturing could temporarily impact margins," says Valecha.

What sets Dixon apart is its ability to

The Strategy

Dixon is no longer just a television assembler—it has become the country's leading EMS player

Today, Dixon operates 26 manufacturing facilities across the country

The company is strengthening relationships with existing clients through long-term joint ventures

The company's long-term bet is clear: deepen presence in the component ecosystem and gradually move up the value chain by developing intellectual property in certain categories
