

Made in India capabilities. “It allowed us to capture growing demand from the commercial and industrial and public sector undertakings segments. That forms 80% of our order book.”

It is constantly reorienting the business. Chalasani says every facet was reimagined, be it customer, leadership, market or product. “Our S144 turbine platform (which accounts for 90% of the order book) and our expanded operations and maintenance services (OMS) portfolio became central to this reinvention,” he explains. Once it recognised OMS as a growth driver, Suzlon moved decisively to make the strategic acquisition of Renom Energy Services by picking up a 76% stake for ₹660 crore.

“Suzlon’s debt reduction has been particularly noteworthy. From a peak of over ₹12,000 crore in FY20, it was brought down to ₹300 crore by FY25, through multiple debt restructuring initiatives and capital infusions via QIPs and rights issues,” says Divyam Mour, research analyst at Samco Securities.

The result was reduced interest costs and higher net profit. “Strategically, Suzlon exited its non-core solar business, allowing it greater focus on the core wind energy operations where it possesses deep domain expertise,” he adds.

Today, Suzlon’s business model is built on what Chalasani calls a lifecycle partnership model. This combines wind turbine installations with 25-year OMS contracts. It’s also a good time to be in renewable energy, with the Indian government setting a 100 GW wind capacity target by 2030—the non-fossil energy goal is

Financials	FY24	FY25	Growth %
Gross Sales (in ₹crore)	6,529	10,851	66.2
