

TELEGRAM BAN

INDIA HAS IMPOSED a week-long ban on Telegram in India, citing concerns over the alleged leak of the NEET examination paper ahead of the re-examination on June 21. Telegram has challenged the order and moved the Delhi High Court arguing that the blanket restriction is disproportionate. Reacting to the ban, Telegram CEO Pavel Durov said the move has punished over 150 million ordinary users while failing to curb the leak, which he claimed had shifted to other messaging platforms.

CHINESE DOMINANCE

CHINA ACCOUNTED FOR 84% lithium-ion cell imports in FY26. While electric vehicles help in reducing the fuel import bill, they are leading to higher imports of battery cells without local manufacturing. India's lithium-ion cell and battery imports from China surged from ₹13,673 crore in FY22 to ₹41,667 crore in FY26 and China's share in India's lithium-ion cell imports jumped from 61% in FY22 to 84% in FY26, according to the to commerce ministry data.

ROBUST MACRO DATA

THE COUNTRY'S STATISTICAL framework just got stronger with the launch of several updated macroeconomic datasets as well as the launch of a new index. The Ministry of Statistics has released an updated series of the Index of Industrial Production while the Department for Promotion of Industry and Internal Trade has released a revised series of Wholesale Price Index and all-new and long pending Producer Price Indices. Not only will these give better estimates of factory output and wholesale and producer level prices but also help make the national accounts more robust and accurate. The Q1FY27 GDP data in August will reflect the impact of these changes.
