## Driving India's Pharma Self-Reliance: Dr. Satish Waman Wagh's Vision for a Viksit Bharat

*By anchoring global healthcare supply chains and expanding into high-value manufacturing, the Executive Chairman of Supriya Lifescience is turning complex chemistry into a pillar of national self-reliance.*

A truly developed nation relies on its ability to build and secure its own critical resources. In pharmaceutical sector, independence means manufacturing the essential ingredients that make medicines effective. For decades, Dr. Satish Waman Wagh, Executive Chairman of Supriya Lifescience Ltd., has worked quietly to secure this independence. By focusing heavily on Active Pharmaceutical Ingredients (APIs), he has helped position India as a highly reliable supplier to global healthcare markets.

When Dr. Wagh established the company in 1987, most of the domestic industry prioritised finished medicines. APIs were often seen as just a background requirement, a low-margin necessity, rather than a strategic asset. He understood early on that APIs were the actual foundation of a secure pharmaceutical ecosystem. The API sector is incredibly demanding. It requires deep technical capabilities, massive investments in chemistry, and the patience to endure long waiting periods for global regulatory clearances. Instead of rushing for quick scale, he invested heavily in building a culture of uncompromising quality and backward integration. This discipline allowed the company to control its supply chain and maintain steady production, even when global markets faced severe disruptions in recent years.

This emphasis on fundamental operational strength yields exceptional business results, proving that patience in business pays off. Today, Supriya

Lifescience exports its diverse API portfolio—covering antihistamines, anaesthetics, and vitamins to over 120 countries, serving a base of more than 1,500 customers. The company generates nearly 85% of its revenue internationally. This disciplined approach is clearly reflected in its robust financial health. The company recently reported a 47% year-on-year jump in Profit After Tax (PAT) for the fourth quarter. Supported by improved capacity utilisation and a sustained expansion into highly regulated markets, Supriya Lifescience continually proves that Indian chemical manufacturing can consistently meet the strictest international benchmarks.

To secure long-term, sustainable growth, Dr. Wagh is now steering the company through a major structural evolution. Moving beyond its traditional role as a pure-play API manufacturer, Supriya Lifescience is actively expanding into the high-margin finished dosage and contract manufacturing (CDMO) segments. The newly commissioned formulation facility in Ambernath is central to this new direction. Having recently secured WHO GMP certification, the site paves the way for the commercial production of injectables, tablets, and capsules for global markets. In a major step for this new vertical, the

company secured a 10-year strategic contract with the European major DSM-Firmenich. This move diversifies the business model and places the enterprise in a strong position to achieve its target of crossing Rs 1,000 crore in revenue by FY27.

A true leader also works to elevate the surrounding ecosystem. Through his extensive work with CHEMEXCIL, Dr. Wagh has consistently supported initiatives that simplify export regulations and improve global market access for other Indian chemical manufacturers. Simultaneously, his vision for growth remains deeply rooted in social responsibility. The Satish Wagh Foundation drives meaningful change by improving rural development, education, and healthcare access in local communities.

As India advances toward economic self-reliance, the journey of Supriya Lifescience demonstrates that lasting global leadership requires technical precision, steady expansion, and an absolute commitment to quality. By securing the fundamental ingredients of healthcare, Dr. Satish Waman Wagh has built a globally trusted institution. His quiet, disciplined approach stands as a powerful model for the industry, actively supporting the bold and ambitious vision of a Viksit Bharat.
