

THE DIGITAL VISIONARY: Shantanu Som's Blueprint for a Technologically Sovereign India

"True digital empowerment happens when technology moves from luxury to infrastructure. At Somnetics, we aren't just building software; we are engineering the sovereign intellectual property that will power a developed India."

At the intersection of enterprise technology and national ambition stands **Shantanu Som**, Founder and CEO of **Somnetics**. As India relentlessly marches toward its Viksit Bharat 2047 goal of becoming a developed economy, Som has emerged as a vanguard leader, proving that homegrown tech innovation is the ultimate catalyst for the nation's socio-economic transformation.

Retaining Indian IP: The Somnetics Triad

Under Som's visionary leadership, Somnetics - co-founded in 1996 with Subrata Mukherjee - has shifted the narrative from mere technology adoption to true indigenous creation. By developing robust, world-class software suites engineered entirely in India, Som is actively securing the nation's data sovereignty and building a formidable fortress of homegrown Intellectual Property (IP). This transformative impact is driven by three flagship innovations:

- **Seamless:** A revolutionary Low-Code/No-Code, Micro-Service Orchestrated Rapid Application Development (RAD) platform. It bridges the operational technology gap, empowering organizations to deploy agile, cloud-native microservices at unprecedented speeds.
- **i-doc:** A highly secure, AI-enabled enterprise-class Document Management and Business Process Automation suite. It serves as the digital backbone for Fortune 500 companies, premier academia, and federal governments, redefining paperless efficiency across public and private sectors.
- **Avegyan:** A specialized, AI-enabled, multi-lingual Digital Repository Management platform. It ensures seamless knowledge archiving, preservation, and data democratization for large-scale institutional archives.

Aligning with the Viksit Bharat Mandate

By retaining 100% of the IP for these sophisticated platforms within India, Somnetics directly supports the core pillars of the government's national agenda:

Boosting Aatmanirbharta (Self-Reliance)

Som's relentless focus on indigenous R&D ensures that Indian administration and enterprises do not rely on expensive, restrictive foreign tech stacks.

Digital Inclusion & Scalability

Whether empowering a government department to streamline public policy or allowing an MSME to scale operations via secure cloud deployment, Somnetics is democratizing access to high-tier technology.

Nurturing the 'Amrit Peedhi'

By designing complex architectures locally, Som is fostering an elite ecosystem of tech talent within India, providing the nation's youth with high-value engineering roles that directly impact national growth.

Core Mission

National Impact

Future Frontiers

Innovation

Engineering highly reliable, secure, and scalable digital solutions tailored for the Indian and global markets. Enhancing governance and business efficiency through paperless workflows and robust digital transformation. Expanding capabilities in AI assisted service automation, intelligent workflows, and secure cloud ecosystems.

The Vision for 2047

For Shantanu Som, the countdown to 2047 is not a distant policy target, but an everyday operational mandate. By aligning Somnetics' corporate goals with India's macro vision, he is ensuring that the company acts as a multiplier effect for the economy. Through innovation, indigenous development, and an unyielding commitment to excellence, Som is actively sculpting the digital landscape of a prosperous, self-reliant, and developed Bharat.
