The Chairman and Managing Director (CMD)
NLC India Limited

Your vision for NLC India's next phase of growth?

NLC India Limited is entering a new phase of transformation with the objective of emerging as a leading and diversified energy company with a strong presence across conventional and future energy sectors. The company's vision is to become a major contributor to India's clean energy transition while continuing to strengthen the nation's energy security. With an ambitious investment roadmap exceeding ₹1 lakh crore by 2030, NLCIL plans substantial capacity additions across solar, wind, thermal power, energy storage systems, and emerging energy technologies. The focus remains on achieving a balanced portfolio that combines dependable conventional energy with accelerated renewable growth.

How do you see renewable energy and clean transition shaping NLCIL's roadmap?

Renewable energy has become central to NLCIL's future business strategy. The company is expanding its solar and wind footprint across multiple states while simultaneously investing in Battery Energy Storage Systems and Pumped Storage Projects to address grid integration challenges. NLCIL also recognizes the long-term potential of emerging technologies such as Green Hydrogen. The company's clean energy strategy is aligned with India's broader goals of sustainability, energy independence, and climate action.
