DEFENCE FACTS

- ▶ India was the world's second-largest importer of arms and military hardware from 2021 to 2025.
- ▶ Army is the least import-intensive service but remains exposed to armoured propulsion and precision munitions.
- ▶ At the foundational manufacturing layer as well, India is dependent on imported raw material like titanium alloys, carbon fibre composites, specialty steels, and electronic-grade metals. It does not produce any of these military-grade materials domestically.
- ▶ The trend will continue. For 2026-2031, India has lined up several high-value purchases despite the push for indigenisation.
- ▶ Based on approved deals, the Defence Acquisition Council clearances and the 15-year defence plan, India will find it difficult to shake off import dependence

caliber precision-guided artillery rounds (\$47 million) were among the US sales approved in FY25.

Based on approved deals, the Defence Acquisition Council clearances and the 15-year defence plan, India will find it difficult to shake off dependence on this critical high-end technology. At the foundational manufacturing layer as well, India is dependent on imported raw material such as titanium alloys, carbon fibre composites, specialty steels, and electronic-grade metals.

BROAD DEPENDENCY

India has sent a mission to the
