NOT MAKING IN INDIA

► **Very few aviation equipment items are manufactured in India, even as Indian firms now build complex aerostructures and components for almost every Airbus and Boeing platform**

► **Every narrow-body is either an Airbus A320 family jet that is built at assembly plants in Toulouse, Hamburg, or Tianjin, or a Boeing 737 MAX assembled in Renton, Washington**

► **No aviation economy, however large, is fully self-contained. Even the United States and Europe depend on globally distributed supply chains for engines, avionics, materials, and components**

► **The question is where India sits in the chain and how much value, technology, and strategic control it owns**

► **Experts believe that since the government encourages foreign direct investment in the sector, more services are being offered by foreign ground support companies**
