

HONDA'S NEW MOVES

HONDA is changing the way it develops cars for the Indian market. Up until now, it relied on its R&D centres in Japan and Thailand. Now, it is open to collaborating with local firms to build cars better suited for the Indian customer. Honda President and Global CEO Toshihiro Mibe recently acknowledged

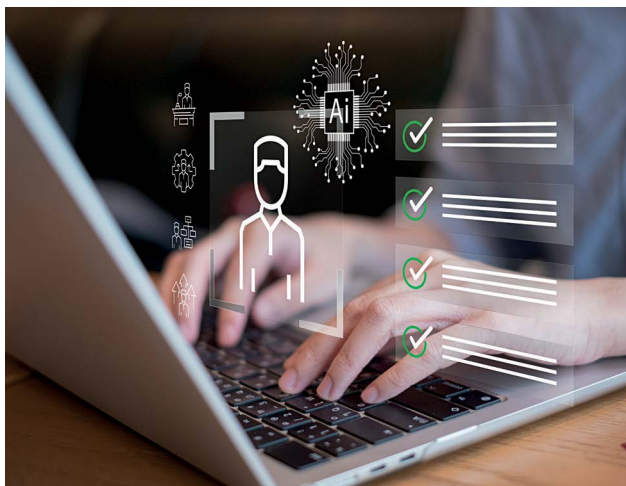

that Honda has not been able to deliver products that meet customer preferences in India. "Climate conditions, vehicle usage and customer preferences vary significantly from country to country and region to region. The global standard approach may have been somewhat excessive," Mibe said.

WORRY FOR NOVO

MORE THAN A dozen Indian companies, including Sun Pharma, Dr. Reddy's Laboratories and Cipla, have launched semaglutide products after patent expiry in March 2026. Novo Nordisk India Managing Director Vikrant Shrotriya said India's obesity-care market "remains in its infancy" despite more than 50 companies registering over 150 brands, intensifying competition in the fast-growing GLP-1 segment. However, Novo Nordisk has warned that semaglutide generics launched in India could have an "adverse impact on sales" in 2026 as the obesity and diabetes drug loses exclusivity in several markets.

RESKILLING FOR AI

AS AI ADOPTION accelerates, enterprises are now redesigning job roles. Most recently, Salesforce said it moved nearly 3,000 employees into sales-focused roles as AI agents automated parts of support and operational work. The shift reflects a broader industry trend where enterprises are prioritising reskilling and redeployment over conventional hiring. Analysts say demand is rising for customer-facing, strategic and AI-management roles, even as routine technology and back-office functions undergo automation-led restructuring.
