POWER OUTPUT: 242 BHP
TORQUE: 350 NM
RANGE: 548 KILOMETRES
(CLAIMED)

petrol and diesel variants. For those looking out for a cleaner ride, JSW MG Motor India sells the only luxury electric MPV in the country, the MG M9, priced at ₹69.9 lakh.

Electrification will accelerate the expansion of luxury MPVs at an unprecedented pace, says Anurag Mehrotra, Managing Director of JSW MG Motor India. India's luxury MPV segment has grown from under 500 units in 2020 to nearly 2,500 units in 2025, reflecting a fivefold expansion in just five years, according to Malhotra.

Luxury mobility is no longer defined solely by design or driving dynamics; it is increasingly shaped by the ability to work, relax and

travel efficiently within the same space. "Luxury MPV buyers treat their commutes as an extension of their day where conference calls happen seamlessly while on the move," says Mehrotra.

Many buyers who traditionally considered sedans are now actively evaluating luxury MPVs for space, rear-seat comfort and versatility. "The shift reflects changing lifestyle priorities where rear seat experience is becoming equally important as badge value," says Mehrotra.

In India, South Korean carmaker Kia's Carnival, prices starting from ₹59.42 lakh, acted as a gateway into the luxury MPV space. Over 17,000 units of the Carnival have been sold since it was first launched in 2020. Professionals and entrepreneurs view these vehicles as 'rolling boardrooms',

where time spent in traffic can be used productively, the South Korean carmaker says.

Indian luxury car buyers are indeed prioritising space, rear-seat experience, and exclusivity, especially for chauffeur-driven use cases, says Ravi G. Bhatia, President & Director of JATO Dynamics India. "While SUVs still dominate aspirational ownership, MPVs are carving out a distinct role where experience-led luxury trumps traditional status symbols, indicating a notable behavioural shift in top-tier consumers," Bhatia adds.

The fact that India is among the few countries where most luxury cars are chauffeur-driven indicates that the future of luxury mobility in India is likely to gravitate towards luxury MPVs. **BT**
