

GREEN HEALING

LARGE HOSPITAL CHAINS ARE INVESTING IN ENERGY EFFICIENCY, WASTEWATER RECYCLING, GREEN BUILDINGS AND DIGITAL MONITORING SYSTEMS TO REDUCE RESOURCE CONSUMPTION AND OPERATING COSTS. YET, BALANCING SUSTAINABILITY INVESTMENTS WITH AFFORDABILITY REMAINS A CHALLENGE

BY NEETU CHANDRA SHARMA

WALK THROUGH the back corridors of any large Indian hospital and you

encounter a world invisible to patients—refrigerated biomedical waste units, cooling towers running through the night, diesel generators on standby, and laundry and sterilisation units consuming large volumes of water. A hospital never sleeps, and it never stops consuming.

India's healthcare sector is expanding rapidly. In several Indian cities that are facing groundwater depletion and seasonal water stress, hospitals are under pressure to reduce freshwater consumption. The debate playing out in boardrooms and on con-
