# “SUCCESS WITH DISCLOSURE”

Four years into the mandatory Business Responsibility & Sustainability Reporting regime, the data is finally large enough to tell us what’s working and what isn’t

126 |

► **CORPORATE DISCLOSURE IS** the substrate on which markets function. Investors price risk, lenders set terms, consumers choose between brands, and regulators monitor systemic exposure. The case for mandatory sustainability disclosure is the same case made for audited financial statements a century ago: when the information available to decision-makers is comparable, verifiable and material, capital and trust flow to the firms that earn them; when it is not, both are misallocated.

When Sebi made the Business Responsibility and Sustainability Report (BRSR) mandatory in FY2022–23 for the country’s top 1,000 listed firms, the wager was precisely that. A standardised, comparable, quantitative sustainability disclosure would do for non-financial information what financial reporting has long done for capital allocation.

Three full reporting cycles later, more than 3,400 BRSR filings sit on the public record. At the Centre for Sustainability and Corporate Governance Research (CSCG) at IIM-Ahmedabad, we have consolidated those filings into a unified
