

WASTE TO CHANGE

Paddy straw is transported by a forklift to the shredding unit at the Indian Oil Corporation ethanol blending facility inside the Panipat Refinery in Haryana, where it is processed further for ethanol production

At IOCL's ethanol blending plant, giant tanks and pipelines carry the ambition of E25 petrol.

Inside the basement of Fortis Memorial Research Institute in Gurugram, reusable glass bottles

move through an in-house bottling and cleaning system.

And in Kalyan near Mumbai, at CERO's vehicle scrapping yard, ageing cars arrive for one final journey.

These spaces are not clean-

room visions of sustainability. They are heavy industries learning a new language, where waste becomes resource and India's green transition is built one dismantled machine at a time.
