

UFlex: Pioneering a Worldwide Green Future for Flexible Packaging

A visionary entrepreneur with an enduring commitment to both people and the environment, Ashok Chaturvedi is widely regarded as the 'Father of the Flexible Packaging Industry' in India. He founded UFlex in Noida, Uttar Pradesh, in 1985 and transformed the company into a US\$1.75 billion global enterprise with a presence across more than 150 countries. Honoured with numerous accolades for excellence, innovation and sustainability, he led UFlex to international recognition at the Davos Recycle Forum in 1995, where the company became the first in the world to be recognised for conceptualising the recycling of mixed plastic waste. Today, UFlex's global sustainability platform, Project Plastic Fix, continues to reflect the long-term vision that has shaped its approach to circularity and responsible growth.

Over four decades, UFlex has evolved from an Indian packaging manufacturer into one of the world's most integrated

packaging solutions providers, with operations spanning India, the UAE, Mexico, Egypt, Poland, CIS, Nigeria, Hungary and the United States. Its diversified portfolio serves industries including FMCG, pharmaceuticals, consumer goods and construction—sectors where product performance, supply-chain resilience and sustainability have become increasingly interconnected priorities.

Central to this transformation has been a deliberate strategy to embed sustainability across the value chain. Years before regulatory frameworks such as Extended Producer Responsibility (EPR) became mainstream, UFlex invested in recycling technologies, resource recovery systems and material innovation capabilities designed to address the long-term challenges of plastic waste. In doing so, the company challenged the widely held assumption that flexible packaging could not be effectively recycled at scale.

UFlex Recycling Plant, Noida (Inside View)

That early commitment is now reflected in measurable impact. In FY26, UFlex processed nearly 586 million post-consumer PET bottles and more than 10,237 metric tonnes of multi-layer plastic waste. Supported by its global recycling infrastructure spanning India, Mexico, Egypt and Poland, along with recently commissioned recycling facilities in Noida, the company's total recycling capacity has expanded to nearly 115,000 tonnes per annum.

As Anantshree Chaturvedi, Vice Chairman and CEO, Flex Films International, explains, "The old narrative suggests that you have to choose between a healthy P&L and a healthy planet. I don't subscribe to that view. At Flex Films, we're treating the polymer molecular chain as much a data problem as a chemical one. By integrating AI-driven spectral analysis and blockchain traceability, we aren't just 'recycling'—we are engineering high-performance circularity. My goal over the next five years is to prove that sustainable packaging isn't a compromise; it's a competitive advantage. We are building a global infrastructure where complex waste isn't a liability, but the high-quality feedstock of a profitable, carbon-neutral future. We're not just changing how the world uses plastic; we're changing what

Mr. Ashok Chaturvedi, Chairman and Managing Director, UFlex Group, hosting Hon'ble Deputy President of South Africa, Mr. Paul Mashatile, along with South African Ministers, Deputy Ministers and members of the official delegation at UFlex's packaging facility in Noida.
