

“Vague commitments will no longer pass muster”

Amarjeet Singh, whole-time Sebi member, on how environment, social, and governance responsibilities will evolve in a changing global order

BY RICHA SHARMA

A

Amarjeet Singh has had a career spanning nearly three decades with the Securities and Exchange Board of India (Sebi). A whole-time Sebi member, he has extensive experience in the development, regulation and supervision of the Indian securities markets.

Singh drove Sebi's engagements on sustainability reporting in recent years. He conceptualised India Inc's low-carbon transition journey through Business Responsibility and Sustainability Reporting (BRSR) and the formation of the Social Stock Exchange and its related ecosystem in India.

In an interview with *Business Today*, Singh says that climate and

sustainability-related risks are increasingly translating into economic and financial risks.

Sebi has received feedback from the ESG Advisory Committee on the need for consolidated data instead of standalone data, and sector specific disclosures to further enhance decision-usefulness. Consolidated sustainability disclosures are important to enable investors to get a complete picture of long-term enterprise value.

Singh says that Sebi did not intend for a static framework for BRSR and that it has to evolve with market maturity, investor needs, and global developments, while remaining grounded in domestic realities. Edited excerpts:

Q: What role does a securities market regulator like Sebi play in the environment and climate space?

A: Climate risk is no longer just an environmental story — it's a financial story. Climate and sustainability-related risks are increasingly translating into economic and financial risks, affecting business models, asset valuations and long-term growth prospects. Our role becomes relevant because these risks have clear and
