

discipline and accountability.”

Karen Chan, Assistant General Manager - Corporate Finance, notes how sustainability metrics are now embedded in financial planning: “The IFC financing structure requires us to meet specific environmental and social targets, which means sustainability is no longer a separate track—it’s integrated into our financial reporting, capital allocation decisions, and performance evaluation. By guiding our business toward these integrated targets, we have established a rigorous governance framework that drives sustainable and long-term performance.”

There is also a strategic angle. Epic is not arriving in Bhubaneswar as a single-site project promoter. It arrives as a globally networked business that combines manufacturing might with design capability, marquee customer relationships, and a track record of reinvention. With a footprint across Asia and beyond—including operations or presence in Bangladesh, India, Sri Lanka, Jordan, the UAE, the UK, Hong Kong, and the United States—Epic now has the heft to support the broader proposition it is making. Its long-standing strength in high-quality products, replenishment, development, and inventory management places it in a stronger competitive position than a factory-only narrative would suggest. Non-Executive Director Philip Markovici notes that “what has distinguished Epic over time is its willingness to invest ahead of certainty, whether in design, technology, sustainability, or now India.”

Epic remains a family-founded business, and the strong imprint of its founding leadership

remains visible. Yet the company also appears to be building a more institutional operating structure in which professional management and organizational systems play an increasingly central role. Aryan Mahtani, Managing Director and Ranjan’s son, reinforces this vision: “Epic’s shareholders are focused on supporting the leadership team as the company scales into new markets. Our commitment is to maintain the culture that’s made Epic successful—one that balances innovation with genuine care for our workforce and accountability to customers.” Viren Daryanani, Managing Director and Sunil’s son, emphasizes the cultural dimension: “Epic has always been built on people who stay, grow, and take ownership. As we scale in India and globally, the challenge isn’t just adding headcount—it’s preserving the culture of accountability and care that defined the early years while creating pathways for talent to lead.”

Project Nirvana, the group’s AI-led digitization push, is part of that evolution. Ajay M K, Non-Executive Director and Strategic Advisor to the Board, says, “the next era of Epic will depend on how well we orchestrate many moving parts at once—design, sourcing, manufacturing, technology, talent, culture and capital—without losing the clarity of the original instinct.” That sentiment echoes from the founding circle as well. Dinesh Virwani, Vice Chairman, notes, “The strength of Epic has always been that trust was earned on the shop floor and in execution, and the goal now is to retain that entrepreneurial energy while building systems that allow professionals to lead at scale.”

That balance matters because the next phase of growth will demand systems, bench strength, and continuity. It will also require the resilience that has marked Epic’s journey through floods, cyclones, political disruption, Covid, tariff shocks, and so on. There are also signs that Bhubaneswar could become broader than a single industrial project. The facility is being designed with training academies for skill development, infrastructure that could support ancillary industries, and initiatives aimed at creating positive impact for the surrounding community. Justin Wong, Group Growth Officer, says that “when Epic evaluates an investment, it looks not only at return on capital but at whether a platform can create long-term relevance for customers, talent, and the surrounding community.” That would fit the group’s history. Over the years, Epic has repeatedly expanded its role when required: trading to manufacturing, execution to design, supply to replenishment, and now from factory-building to digitally enabled, sustainability-linked operations. Bhubaneswar fits that pattern.

Epic represents a distinctive Indian MNC business success story: built in overseas Asian markets, globally seasoned, family-founded yet increasingly professionalized, now ready to invest significant institutional capital & energy in India. If Trimetro India delivers on its promise, Bhubaneswar could become the point at which Epic ceases to be seen primarily as an overseas-rooted apparel group and begins to be recognized as a major contributor to India’s next chapter in core manufacturing capability-building in industries like apparel.
