

# BANKING ON NET-ZERO GOALS

**YES Bank has shifted several offices, including its corporate office, to renewable energy. Its sustainable finance strategy, too, is bearing fruit**

**BY NACHIKET KELKAR**

**Y**ES BANK HAS been on an expansion spree. In the year ended March 2026, the private sector lender added 82 new branches as part of its 400-branch target in four-five years. But it has not lost sight of its sustainability goals. Among its many green goals is reducing greenhouse gas emissions from operations to net zero by 2030.

To achieve these targets, the lender will power most of its facilities from renewable energy. Already, key facilities, including its corporate office, along with 82 others, have migrated to renewable power. It has been recognised as the Most Sustainable Bank in the Financial Sector Category in this year's *BT India's Most Sustainable Companies*.

The target reflects not only the bank's environmental ambition, but a broader shift in how it is reimagining operational resilience and climate-readiness, Niranjan Banodkar, Group Chief Financial Officer, tells *Business Today*.

"Our approach to achieving this target rests on three pillars—stronger data systems to improve accuracy and transparency of energy and emissions tracking; optimising energy consumption by phasing out older equipment and investing in energy efficient infrastructure; and accelerated renewable adoption by exploring new and evolving avenues such as open access and green tariff," says Banodkar.

The bank has been among the first to measure and report financed emissions of its electricity generation loan portfolio and develop targets to align with global decarbonisation pathways.

Over the years, YES Bank has
