

groundwork for a comprehensive petrochemical and manufacturing ecosystem capable of serving both domestic and international markets.

ESG at the Core of Industrial Development

What distinguishes Madhya Pradesh from many emerging industrial destinations is its emphasis on Environmental, Social and Governance (ESG) principles as a central pillar of economic development. Rather than treating sustainability as a compliance requirement, the state has integrated ESG considerations into its long-term industrial strategy.

Environmental Responsibility

Industries are encouraged to adopt cleaner production technologies, energy-efficient processes, wastewater recycling systems and resource optimization measures. Initiatives promoting circular economy practices are helping reduce industrial waste while improving operational efficiency.

Social Inclusion

Industrial growth is being linked to broader social development goals. Employment generation, skill enhancement, women entrepreneurship, MSME development and community engagement are receiving increasing policy attention. This approach ensures that industrial expansion contributes to inclusive growth and creates meaningful opportunities for local communities.

Preparing for Future Industries

Recognizing the rapid evolution of global industry, Madhya Pradesh is actively encouraging investments in emerging sectors that will shape the next generation of economic growth.

These include:

- Electric Vehicles (EVs)
- Green Hydrogen
- Renewable Energy Equipment Manufacturing
- Sustainable Infrastructure
- Advanced Manufacturing
- Artificial Intelligence
- Industry 4.0 Technologies

Digital Innovation Ecosystems

By aligning industrial policies with future technologies and sustainability goals, the state is creating a resilient and future-ready economy capable of competing in a rapidly changing global marketplace.

India-LAC Forum 2026: Opening New Global Horizons

The India-LAC Trade and Investment Forum 2026 comes at a time when economic relations between India and Latin American & Caribbean nations are gaining strategic importance. Both regions offer complementary strengths in natural resources, manufacturing capabilities, technology, agriculture and consumer markets.

The forum aims to facilitate business partnerships, investment opportunities, technology collaborations and trade expansion while strengthening people-to-people and institutional ties.

For Madhya Pradesh, the event provides an opportunity to present its industrial capabilities, investment opportunities, and sustainability-driven growth model to a global audience.

State Ready for Future

Madhya Pradesh's industrial journey reflects a broader transformation taking place across India—one that combines economic growth with sustainability, innovation, and inclusivity.

With world-class infrastructure, abundant resources, major industrial investments, renewable energy leadership and a strong commitment to ESG principles, the state is increasingly emerging as a preferred destination for responsible and future-oriented investments.

As global investors search for destinations that offer growth, stability, sustainability and scale, Madhya Pradesh stands ready to lead the next chapter of India's industrial success story.

From the heart of India, Madhya Pradesh is building a future where economic progress and sustainable development move forward together.

Major Investment Announcements Renewable Energy:

- NTPC announced investments exceeding ₹2 lakh crore in renewable energy projects.
- Adani Group committed around ₹1.1 lakh crore, with discussions for additional investments.
- Technology & Electronics:
 - Technology companies committed ₹25,640 crore, expected to create over 1.83 lakh jobs.
 - The state approved a ₹1,295 crore Semiconductor Manufacturing Cluster near Bhopal in May 2026.

Industrial Parks & Manufacturing:

Cabinet approvals in March 2026 included 12 major industrial projects expected to generate around 12,000 jobs.

Important Context

The figure of ₹30.77 lakh crore represents investment proposals, MoUs, and commitments, not actual money already invested on the ground. Historically, only a portion of MoUs convert into operational projects. However, Madhya Pradesh has reported that projects worth more than ₹4.73 lakh crore are already moving through implementation stages.

For your India-LAC Trade & Investment Forum 2026 presentation, a strong headline would be:

“Madhya Pradesh has attracted over ₹30.77 lakh crore in investment commitments, positioning itself among India's fastest-growing industrial investment destinations.”

As of June 2026, Madhya Pradesh has attracted investment proposals worth approximately ₹30.77 lakh crore through the combined efforts of the Global Investors Summit (GIS) 2025, regional industry conclaves, roadshows, and investor outreach programs. This is the highest investment commitment ever received by the state.

Category	Investment Value
GIS Bhopal 2025 proposals	₹26.61 lakh crore
Total proposals including regional conclaves & roadshows	₹30.77 lakh crore
Expected employment generation	₹21.4 lakh+ jobs
Foreign investment commitments	₹31,851 crore
Industrial land allotted to 1,028 units	₹1.17 lakh crore proposed investment
Industries under active implementation	₹4.73 lakh crore+
Projects under realization process	₹8.63 lakh crore+
