

FOR YEARS, SUSTAINABILITY was largely associated with reporting frameworks, disclosures, and compliance mandates. But for ABB India, the local arm of the Swiss engineering giant, the conversation is increasingly shifting towards operational efficiency, circularity and long-term industrial resilience.

The company has been recognised as the Most Sustainable Company in Capital Goods in the category of Sectoral Excellence in Manufacturing in this year's *BT India's Most Sustainable Companies*. Guided by a three-pillar framework focused on enabling a low-carbon society, preserving resources, and driving social progress, ABB India is embedding sustainability into everything from factory operations and customer solutions to supplier engagement and community development.

"Our sustainability journey is linked to our core purpose, creating an ecosystem that is more sustainable and resource-efficient, while helping industries transition through technology-led solutions," says Rajesh Jha, Country Sustainability Manager, ABB India.

In 2020, the company laid out its 2030 sustainability targets, aligning them with broader global climate and ESG commitments. Since then, it has increasingly focused on integrating sustainability into core business operations. From energy-efficient motors and AI-led building management systems to water-positive factories and supplier ESG programmes, ABB is positioning sustainability as both operational imperative and business opportunity.

At the centre of this strategy is the focus on energy productivity,

THE THREE-PILLAR STRATEGY

From renewable energy and smart factories to water-positive sites and supplier ESG programmes, ABB India is turning sustainability into an operational and business strategy
