ACC'S BLUEPRINT FOR A GREENER INDIA

In FY26, the company co-processed 4.5 lakh tonnes of alternative fuels and waste-derived materials

BY JYOTINDRA DUBEY

WHEN MOST PEOPLE think of cement, they think of dust, kilns, and carbon. ACC Limited is working to change that image. Across 11 integrated plants and 117 ready-mix facilities, the company has quietly woven sustainability into the fabric of its operations: from fuel to water conservation, to the communities it serves. The result is a manufacturer that is as focused on its environmental footprint as it is on its output.

It has been recognised as the Most Sustainable Company in Cement in the category of Sectoral Excellence in Manufacturing in this year's *BT India's* Most Sustainable Companies.

The numbers tell part of the story. In FY 2026, renewable and green energy contributed nearly 30% to ACC's energy mix. Blended cement, which uses supplementary materials in place of clinker and carries a significantly lower carbon footprint, accounted for 94% of the company's total production.

What makes the roadmap credible is how it translates into decisions at the plant floor level, whether in the fuel mix chosen for a kiln, the

raw material sourced for a batch, or the logistics route selected for a dispatch.

"At ACC, sustainability is embedded into day-to-day manufacturing operations rather than treated as a standalone initiative. Guided by its Sustainable Development 2030 roadmap, the company focuses on climate and energy, circular economy, water and nature, and people and communities," a company official told *BT*.

In FY 2026, the company claims to have co-processed 4.5 lakh tonnes of alternative fuels and waste-derived materials and consumed 10 million tonnes of supplementary cementitious materials in its production process. All these numbers reflect a deliberate strategy to reduce dependence on conventional raw materials while simultaneously addressing the broader problem of industrial waste.

Just as the packaging industry is doing with recycled plastic, ACC is trying to do the same with industrial and municipal waste at scale. With 10 million tonnes of supplementary cementitious materials, ACC is operating one of the largest circular
