

PORTS OF CHANGE

Adani Ports and Special Economic Zone has started deploying automated container cranes operated remotely from climate-controlled cabins at Vizhinjam port

BY JYOTINDRA DUBEY

AT INDIA'S COASTLINE a quiet transformation is underway, one that goes well beyond cargo tonnages and trade corridors. Adani Ports and Special Economic Zone (APSEZ), the country's largest commercial port operator, is rewriting what it means to build infrastructure at scale.

Adani Ports has been recognised as the Most Sustainable Company in Logistics & Ports in the category of Sectoral Excellence in Manufacturing in this year's *BT* India's Most Sustainable Companies.

India moves roughly 95% of its trade by volume through its ports. That makes port infrastructure not just an economic asset but an environmental responsibility. For APSEZ, which operates across a dozen-plus ports with nearly 27% share in India's cargo movement, that responsibility has become a core business proposition and not just a footnote.

The numbers are striking. The company has completed afforestation across more than 4,000 hectares of coastal and terrestrial

land, making it one of the largest such corporate-led efforts in India. The initiative, carried out in partnership with local communities, isn't simply about planting trees. It is about restoring coastal ecosystems—mangroves that buffer against storm surges, stabilise shorelines and serve as nurseries for marine life, while simultaneously creating livelihood pathways for the communities that live alongside them.

"Sustainability is about building ports that strengthen both ecosystems and communities. At APSEZ, sustainability is embedded into every stage of growth, from planning and construction to operations. As India's trade infrastructure expands, our focus is on building ports that are efficient, resilient and environmentally responsible," a company official said.

That philosophy shows up most vividly at Vizhinjam, the deep-water transshipment port under development in Keralam. There, APSEZ has begun deploying automated container cranes operated remotely from climate-con-
