

Toyota is running a flex fuel pilot with its strong hybrid multi-purpose vehicle, the Innova Hycross. Maruti Suzuki India Ltd launched India's first flex-fuel car, a Wagon R, on June 4

94 |

FOR DECADES, India's automobile story has run on petrol, diesel and compressed natural gas. Then came electric vehicles, the industry's new disruptors, promising cleaner mobility. Now, another contender is pulling into the fast lane: flex-fuel vehicles (FFVs), powered not just by petrol but also ethanol drawn from India's vast agricultural economy.

In 2026, India is seeing the launch of a bevy of cars and two-wheelers that can run on up to 100% ethanol. Though work on FFVs had been going on for quite some time and some prototypes
