

in various conditions. India has diverse city environments, and AV technology must be able to adapt to them. Second, there must be a regulatory framework in place. Since Uber already operates within existing regulations in India, we expect the government to be involved in shaping AV regulations as well. We are hopeful that both technological advancements and regulatory frameworks will evolve, and when

they do, we'll be ready to launch in India.

From an Indian perspective, what are the top two or three challenges that need to be addressed, and how can policy support accelerate AV adoption?

From a policy standpoint, two key areas need focus—supporting both electric and autonomous vehicles while ensuring safety remains a top priority. Safety is the

most critical aspect of AV technology, not just in India but globally. Establishing clear safety guidelines and regulations for AVs will be essential.

Beyond Jaguar, will Uber's autonomous vehicle fleet expand to other brands?

Yes, we believe that Waymo and other partners will collaborate with many more OEMs. Uber also has direct relationships with OEMs, so you will

definitely see a wider variety of autonomous vehicles on the road, including models of different costs and sizes.

Profitability is a key focus for Uber. How does the company plan to drive profitability in the autonomous technology space?

Right now, we are in the very early stages of this journey, and it's a long road ahead. While economics certainly matter, our current priority is building a platform that partners want to integrate with and that riders love to use. Over time, we'll see the financial aspects evolve.

Elon Musk recently announced Tesla's robo-taxi initiative in Austin, making the city a battleground for autonomous taxis. Given that Tesla manufactures its own vehicles, do you see this as a competitive threat?

We already have hundreds of thousands of Teslas operating on our platform, and we'd love to work with them. It's great to see autonomous technology advancing rapidly.

While we remain focused on our partnership with Waymo, we aim to collaborate with as many technology providers and OEMs as possible. At the end of the day, Uber is a platform, and we welcome all partners who want to work with us. **BT**
