

ADANI'S BARSANA BIOGAS PLANT: HOME TRUTHS ON SUSTAINABLE ENERGY AND ECO-FRIENDLY FARMING

The facility, which became operational in March 2024 in Mathura, represents a significant advancement in India's bio-CNG production.

India is pulling out all stops to tap into renewable energy sources such as solar, wind and biogas in farming for twin gains: to reduce carbon footprints and optimum utilisation of reliable, low-cost energy supply. Modern biogas technology is particularly effective as it meets growing energy needs, increases farm productivity, and reduces carbon emissions from unmanaged cattle waste.

In pursuit of sustainable energy and environment-friendly agricultural practices, Adani TotalEnergies Biomass Limited (ATBL) has launched a groundbreaking initiative in Mathura, Uttar Pradesh. The Barsana Biogas Plant, inaugurated in March 2024, represents a significant

advancement in India's bio-Compressed Natural Gas (CNG) production.

Situated within the expansive Shree Mataji Gaushala, which is home to approximately 55,000 cows, this cutting-edge facility showcases remarkable innovation in waste management and renewable energy. The plant's objective is to convert agricultural waste into valuable resources, setting the stage for a greener and more sustainable future.

Located in the picturesque region of Mathura, the Barsana Biogas Plant embodies ATBL's dedication to a sustainable future. This advanced facility signifies the commencement of an ambitious project

designed to transform India's bio-CNG production sector.

ATBL is a wholly-owned subsidiary of Adani Total Gas Limited, a joint venture between India's Adani Group and France's TotalEnergies Ltd; and is the leading energy transition company in the country.

55,000 Cows!

Located in Shree Mataji Gaushala premises, which houses around 55,000 cows, ATBL's Barsana Plant represents the initial step in a three-phase project that will ultimately process up to 600 tonnes per day (TPD) of agricultural waste like paddy straw and press mud and cattle dung and generate 42 TPD of Compressed Bio-gas (CBG),
