

Honors in the Jerome Fisher Program in Management and Technology from the University of Pennsylvania, says it was all the result of a “team effort inspired by his father’s vision,” which he describes as the bedrock of TVS Motor’s growth over the years.

A stronger brand focus and distribution network has contributed to the improved performance of TVS Motor, which saw its stock post a return of 278% in the three years between December 31, 2021, and December 31, 2024, compared with a 36% gain in the benchmark Nifty during the same period.

Harshvardhan Sharma, head of the auto retail consulting practice at Nomura Research Institute (NRI), says with its deep market penetration, EV road map and global expansion strategy, TVS Motor has the potential to be India’s most dominant two-wheeler manufacturer in the next decade.

Sharma says a structured EV growth model, global expansion and a multi-source procurement strategy reducing its dependence on China-based lithium-ion battery supply chains have contributed to TVS Motor’s growth. “Additionally, 70% of new ICE two-wheeler demand is coming from Tier-II and III cities. TVS’ Raider 125 and Jupiter 110 models cater to these customers,” adds Sharma. ICE is short for internal combustion engine.

Between April and December of FY25, TVS Motor posted gross sales of ₹32,843 crore, up 12.8% from ₹29,102 crore a year prior. Operating profit grew 16.6% to ₹4,208 crore and net profit 24.19% to ₹1,740 crore in the same period.

ELECTRIC SHOWS THE WAY

Going ahead, Venu is betting big on electrification. TVS Motor has committed an investment of ₹10,000 crore towards battery technology research and development, and battery charging infrastructure partnerships.

It was among the early movers in the electric two-wheeler industry, launching its first electric scooter, the TVS

iQube, in 2020. The company overcame initial setbacks to post impressive sales in the last three years.

TVS Motor was struggling with dismal EV sales and market share (2% in FY21 and 4% in FY22) when Venu stepped in. Several start-ups had stolen a march over the company.

Its aggressive pricing and a connected vehicle strategy, or emphasis on vehicles with internet connectivity, paid off. Between calendar year 2022 (CY22) and CY24, the company’s electric two-wheeler sales shot up from 47,182 units to 221,293. In CY24, TVS Motor had a market share of 19% in the electric two-wheeler segment.

The company has also started deliveries of its second electric family scooter (after iQube), the TVS X. Another variant is in the pipeline. TVS Motor is also introducing an electric motorcycle. The company will offer an entire portfolio of electric two-wheelers, says Venu.

With electrification at the heart of the company’s long-term strategy, TVS Motor launched its first electric three-wheeler and an electric bicycle this January.

ELECTRIC THREE-WHEELERS

The company plans to roll out electric three-wheelers in the cargo segment as well. “Our focus is now to achieve similar market share in the electric three-wheeler segment as that of ICE three-wheeler segment. We will look to double our volumes in the domestic market. In the international market, we already have a significant presence,” says Venu.

To expand its presence in the premium electric three-wheeler segment, TVS Motor has partnered Hyundai Motor India Limited to cater to customers of last-mile delivery services. The company will be launching products powered by ethanol and Compressed Natural Gas (CNG) too.

GOING PREMIUM

Premiumisation remains a focus area for TVS Motor, which will be launching the
