REDEFINING VALUE IN THE AGE OF INTELLIGENCE

Due to technological disruptions and climate change, many India CEOs now feel the need to recalibrate their decision-making processes

GLOBAL MEGATRENDS SUCH

as technology disruption, fracturing global trade, climate change and demographic dividend often

have a domino impact on businesses, compelling them to take prompt action to remain resilient in the face of challenges. This year, PwC's *28th Annual Global CEO Survey: India Perspective* underscores this point. More and more CEOs are concerned about the economic viability of their businesses, compared to the previous year. In 2023, nearly 60% India CEOs were confident that their companies would be viable for more than 10 years on their current path. But in 2024, there was a five-percentage point dip. Due to technological disruptions and climate change, many India CEOs now feel the need to recalibrate their decision-making processes and press the intelligent reinvention reset button to survive and be viable in the marketplace.

In this context, business viability demands innovation ecosystems that entail interdependencies across indus-

tries, organisations and the larger society. This implies that such stakeholder ecosystems should extend beyond the traditional boundaries of industries, products, and services, and deftly weave in reconfigurations to ensure organisational growth and sustenance. India's innovation landscape has already expanded significantly in the past few years. The country is ranked 39th*. It is time for businesses to graduate to the next level to form innovation ecosystems that drive rapid reinventions.

The survey indicated that four in 10 CEOs in India and across the world said their companies have started to compete in at least one new sector/industry in the last five years. Of these, 50% of India CEOs (as against 58% globally) stated that 1–20% of their revenue in the last five years came from entering a new sector or industry, such as consumer, industrial manufacturing, aerospace and defence.

Value is being redefined, shifting gears to accelerate from linear to multidimensional. Companies that can identify opportunities in sectors that leverage their existing resources and are
