

from three colour temperatures and brightness levels to suit their grooming tasks, while a proximity sensor allows touch-free operation, with a manual mode also available—making it a true focal point of luxury design.

Understanding the high-involvement nature of these decisions, we have established three experiential centres in Delhi, Bengaluru, and Mumbai, along with Kohler Studios in Hyderabad and Ahmedabad. These hubs serve as immersive spaces where customers can visualize personalized combinations of basins, faucets, and colour schemes using cutting-edge virtual technology. Our commitment remains steadfast in catering to the evolving needs of Indian consumers.

**What is the methodology adopted to collect data on customer feedback?**

Our customer feedback methodology is a testament to our commitment to excellence. We employ a robust feedback system that integrates insights from consumer panels, architect advisory groups, and a structured Net Promoter Score (NPS) framework. Our relentless pursuit of consumer insight and continuous improvement ensures that each design and innovation is finely tuned to meet evolving customer expectations. Moreover, we draw inspiration from premium industries such as luxury automobiles and high-end audio systems, applying their best practices to our rigorous product testing. Every Kohler product undergoes real-home trials before launch, ensuring that we not only meet but exceed consumer expectations.

**What are Kohler's emphasis and initiatives towards inclusivity and sustainability?**

Inclusivity and sustainability are at the heart of Kohler's ethos. We are committed to creating experiences that empower consumers to lead gracious, healthy, and sustainable lives. Our global vision is evident in our strategic investments in wellness companies like Dubai-based Barr and Wray and the renowned spa manufacturer KLAFS, allowing us to

develop holistic luxury solutions for residences, spas, and condominiums. With a bold target of achieving net-zero emissions by 2035, Kohler is spearheading innovations that blend superior performance with sustainability. For example, our latest flushing systems have reduced water consumption from 6 litres to just 3.6 litres per flush, saving up to 12,000 litres of water annually per bathroom. This year, our goal is to conserve 500 million litres of water, with a long-term ambition of saving 2 billion litres. Our footprint extends across over 80 cities, including tier-one and tier-two markets, reinforcing our dedication to both luxury and sustainability.

**What are the other new product launches apart from the Jacuzzi?**

Beyond the Jacuzzi, our recent innovations encompass every aspect of the Kohler bathroom experience. While we have long been pioneers in vitreous products and faucets, we are now breaking new ground in performance showering. Our revolutionary "WaterMind" technology, inspired by nature, features auto-adjusting nozzles that respond seamlessly to water pressure, ensuring optimal performance without compromise. Our advancements also extend to steam, sauna, and shower enclosures, where we maintain a leading position. Additionally, recognizing the needs of senior citizens, we have designed a specialized bathtub with an opening for effortless access, enhancing inclusivity in bathroom design.

**Could you share the strategy that you want to implement to expand Kohler's offerings?**

Our expansion strategy is driven by the exceptional consumer feedback we have received regarding our service levels. We are working towards creating a product range so distinctive that consumers instinctively seek out Kohler solutions for every aspect of their home. To achieve this, we are launching comprehensive service and maintenance contracts. Last year, we trained thousands of plumbers to enhance expertise in kitchen and bathroom installations, reaffirming

our belief that investing in technical excellence yields long-term benefits. While DIY culture thrives in Western markets, in India, our dedicated service partners are the backbone of our customer support. Over the next few years, we anticipate that 80–90% of service calls will be managed through Kohler's DIY platform. Additionally, we are launching specialized cleaning solutions under the "Aging Gracefully" initiative to maintain the pristine quality of our products throughout their lifetime. As the first in the kitchen and bath segment to partner with Samsung on integrated home initiatives, we are at the forefront of innovation. With India emerging as the fastest-growing market in our global portfolio, our commitment to innovation in this region is stronger than ever.

**What is your vision for Kohler's customer service experience?**

My vision for Kohler's customer service experience is to position India as one of Kohler's most premium global markets, where every consumer enjoys a seamless, end-to-end journey—from design and installation to post-service support. Drawing on my background in FMCG, luxury, and technology, I see immense potential in harmonizing these elements to redefine customer engagement. We aspire to be a constant, trusted presence in our customers' lives, enriching their everyday experiences with our products. To further this commitment, we have introduced an elite desk offering personalized service levels and maintenance packages for our top clientele, ensuring swift resolution of any issues. Additionally, our multi-functional forums, such as the India Quality Council, which I personally chair, bring together expertise from design, engineering, and post-sales service to drive continuous improvement in our offerings.

As we embrace a future defined by bold innovation and unwavering sustainability, Kohler continues to redefine luxury living—proving that a gracious life is not just about aesthetics, but also about a commitment to excellence and a sustainable tomorrow.
