

Logitech goes beyond tech to unlock the power of presence: Anand Lakshmanan

Anand Lakshmanan, Head of Logitech for Business - India, discusses how the #BePresent campaign is transforming professionals' perceptions of meetings, collaboration, and engagement. Logitech is redefining what it means to truly be present by blending technology with behavioural insights.

Could you share the inspiration behind Logitech's #BePresent campaign?

Meetings are the backbone of business; however, many professionals find themselves physically present but not fully engaged. Distractions, both digital and environmental, weaken involvement and hinder decision-making. This realization led to the creation of the #BePresent campaign.

As technology leaders, we aimed to enhance the meeting experience by not only improving the mechanics of meetings but also fostering a culture of active participation. This campaign encourages professionals—from CEOs to early-career employees—to recognize the importance of being fully present whether they are leading meetings, sharing ideas, or simply listening. It's not just about better tools; it's about cultivating better habits.

How does the campaign go beyond just products and features?

We recognized that making a real impact required a cultural shift that extended beyond merely showcasing technology. That's why we introduced several engaging materials aimed at encouraging professionals to reflect on their meeting behaviours.

• **The Graphic Book:** We partnered with a well-known cartoonist to create a visually engaging book that humorously portrays common meeting personalities. The book aims to make readers laugh, relate to the content, and reconsider their participation in meetings.

• **The Meeting Quotient (MQ) Survey:** We developed an interactive assessment that allows individuals to evaluate

their engagement levels in meetings. Based on their responses, participants are categorized as Meeting Maestros, Collaborative Connectors, or Emerging Engagers, and each group receives personalized insights.

• **The Microsite:** We created a dedicated hub at info.logitech.com/bepresent.html where professionals can explore resources, complete the MQ survey, and access exclusive content designed to improve their meeting effectiveness.

How does Logitech's technology enable presence in meetings?

True presence goes beyond just being physically present; it requires full attention, effective communication, and a spirit of collaboration and inclusiveness. Logitech's video collaboration solutions play a crucial role in achieving this:

- Crystal-clear audio and video eliminate distractions caused by poor sound quality or camera issues.
- AI-powered framing and noise cancellation ensure that every voice is heard, regardless of location.
- An intuitive design and accessibility features make meetings more inclusive, allowing diverse teams to contribute effortlessly.

The objective is simple. When technology seamlessly blends into the background, people can focus on what matters—the conversation.

What does this campaign tell us about the future of collaboration?

The way businesses meet, communicate and connect is evolving. The success of the #BePresent campaign has demonstrated

that professionals are eager to rethink their meeting habits—not just in how they participate but also in how they experience collaboration.

This campaign serves as a conversation starter, highlighting the importance of being present. Organizations are now looking beyond mere productivity; they desire more engaging, human, and immersive meeting experiences.

At Logitech, this reaffirms the belief we have always held - technology should facilitate better conversations, not complicate them. When the right tools are combined with the right mindset, meetings can become more than just another item on the calendar—they can transform into spaces where real impact occurs.
