

Engineering Trust, Delivering Excellence: The Welspun Corp Legacy

Mr Vipul Mathur
MD & CEO
Welspun Corp Ltd.

For nearly three decades, Welspun Corp Ltd (WCL) has been a global leader in large diameter line pipe business, providing crucial infrastructure solutions to Oil & Gas and water industries. Known for its pioneering efforts in pipe solutions, WCL's journey from being a global leader in line pipes to a multi-business conglomerate is a story of resilience, adaptability, and engineering excellence. Today, the company stands at the crossroads of transformation, expanding its reach into new sectors, enhancing its capabilities, and embracing the future with an eye on innovation.

From delivering pipelines to some of the most remote and difficult parts of the world to becoming a trusted name in the water transmission industry, WCL has had a significant impact on critical infrastructure. Today, the company operates across six continents, with manufacturing facilities in India, the USA, and Kingdom of Saudi Arabia.

As the global energy landscape evolves, Welspun Corp is positioning itself at the forefront of the future of pipeline

technology. With the emergence of new technologies, such as hydrogen pipelines and carbon capture pipelines, the company is preparing to meet the demand for new, sustainable solutions. One remarkable feat is WCL becoming the first Indian pipe mill to produce electric resistance welded (ERW) pipes designed for the transportation of gaseous hydrogen – a major step in its strategy to embrace future technologies. This journey began in 2022 when Tata Steel and Welspun Corp entered into an MOU to develop hydrogen-compliant API grade pipes through the ERW pipe route. The company sees a strong global demand for ammonia transmission and hydrogen, expecting these areas to open up vast opportunities.

Over the past two years, Welspun Corp has expanded its footprint into new verticals, setting up a strong presence in ductile iron (DI) pipes, stainless steel pipes, and building materials.

One of its most notable moves has been in the DI pipes business, where it has emerged as a credible player in a competitive industry. With India's ambitious Nal Se Jal initiative aimed at ensuring drinking water accessibility for every household, Welspun is tapping into a growing demand for high-quality pipes to support the Government's vision. The company is investing heavily in its DI pipe manufacturing capacity, with plans to expand from 400,000 tonnes to 600,000 tonnes per annum in India and to set up a 250,000-tonne capacity facility in Saudi Arabia.

Welspun Corp's stainless steel business, Welspun Specialty Solutions Ltd (WSSL), has witnessed a remarkable transformation. Under a well-defined growth strategy, WSSL has turned profitable by expanding its offerings to higher value-added products such as nickel alloy, duplex, and super duplex grades. Its focus on R&D has helped the company serve critical industries like

thermal power, nuclear power, defense, and petrochemicals. WSSL's milestone achievement of becoming the first indigenous company qualified by BHEL and NTPC for supercritical boiler tubes further solidifies its growing prominence in the market.

Welspun Corp's acquisition of Sintex has proven to be a strategic move, infusing new life into an iconic brand. Sintex's legacy, combined with Welspun Corp's strong market penetration and customer base, creates a powerful synergy that is expected to drive the business forward. The revitalization of Sintex is poised to strengthen its position in both the B2B and B2C markets.

As India continues its rapid urbanization and infrastructure development, the demand for high-quality construction materials like TMT rebars is expected to grow significantly, positioning Welspun Corp as a key player in this sector. The company's facility in Gujarat, with a capacity of 400,000 tonnes per annum, is equipped with state-of-the-art technologies to produce high-quality TMT rebars that meet the demands of modern infrastructure projects.

Welspun Corp Ltd's remarkable journey from a leader in large diameter pipes to a multi-faceted conglomerate serves as a testament to its vision, agility, and commitment to growth. With its diverse portfolio, global presence, and strong focus on innovation, the company is well-positioned to lead the charge into the next phase of industrial evolution, contributing not only to infrastructure but also to sustainable development on a global scale.

The Company is expanding its production capacities across its businesses in its three core geographies, including, HFIW pipes in the US, LSAW pipes and DI pipes in Saudi Arabia, and an impressive pipe manufacturing portfolio in India, thereby laying a strong foundation for continued success and achieving pole position.
