

# Celebrity NRI Surgeon Brings Healthcare Revolution in India

**Renowned UK-based Indian Surgeon brings groundbreaking technology preventive and nutrition solutions to India.**

Changing lives by disruptive technology: In an era where the world faces escalating health crises, few leaders have dared to reimagine the future of healthcare from its very foundation. Dr. Prashant Jindal, an internationally renowned refractive eye surgeon, is one such visionary. Through his groundbreaking initiative, Vitonnix, Dr. Jindal is shaping a global movement that places India at the epicentre of preventative healthcare innovation.

Based in the UK for two decades, Dr. Jindal is a leading refractive surgeon, and has stood at the pinnacle of surgical excellence, trusted by and having operated on Olympic athletes, world champions, and celebrities worldwide.

A philanthropist, he has also been the nidus of numerous charities especially for orphans. His parenting book, 'One Minute Super Dad' was published by Harper Collins and was an all-time Amazon Best seller, touching families all around the globe.

Refractive Surgeon  
CMD, Vitonnix UK

He works closely with the Indian and UK government health departments to bring about changes and director of exchange programmes. He is a family man and a proud father of two kids with his daughter studying in Cambridge. "A surgeon saves one life at a time," Dr. Jindal reflects. "Prevention can save millions." It is this philosophy that fuelled over a decade of rigorous research and culminated in the creation of Vitonnix, and its UK based Sublispray® technology, a technology using the power of sublingual (under the tongue) route of absorption, which needed extensive research for optimum effective products through the route, besides being a God-Sent boon for people who are unable to consume tablets or capsules. Over a million bottles went in no time after the launch.

Developed in the UK, Vitonnix was launched in India with the blessings and support of Shri Ratan Tata, as the future of nutrition in India. Dr Jindal set out to bring to his motherland a revolutionary line of nutraceuticals designed to address some of its most urgent healthcare challenges.

Sublispray® UK innovative technology's delivery method has redefined how supplements are absorbed and utilized by the body, and brought their importance back into the global spotlight, inciting world class manufacturing of nutraceuticals. With its philosophy that every consumer of Vitonnix products is akin to a patient receiving surgical precision & perfection, Vitonnix delivers cutting-edge solutions.

Over the next three years, his mission is clear - to reduce India's infant mortality rate by 50% and to decrease nutrition-related blindness by at least 10%. The most common micro-nutrition deficiencies like Vitamin D, B12 involve over 70% of India's population. But more importantly, conditions like ageing & degeneration of eye, skin, heart; obesity, diabetic issues, have crores of people silently suffering, for whom specific products have been developed. These goals translate into millions of lives saved and transformed.

Continuing its philanthropic works, Vitonnix, via leading NGOs and CSR projects, such as Search Foundation, has made massive donations to get world class products to underserved communities & improve their QOL, Quality of Life. Beyond human health, Vitonnix has expanded into developing advanced healthcare products for pets.

Dr Jindal asserts, "If micro-nutrients reach the body organs effectively, it is capable to handle anything". Vitonnix is leading a global health renaissance—one that will redefine the meaning of care for generations to come.
