- ▶ **EXPECTS FIRST A350 BY FY28, TO FLY NON-STOP TO US**
- ▶ **59 CODESHARE DESTINATIONS WITH 557 FLIGHTS**

India's international seat capacity, with Air India (including Air India Express) at 24%. It plans to change this by deploying 40% capacity on the international sector by 2030, up from 28% at present.

TAKING ON AIR INDIA

The huge potential means Indian aviation players are going all out to capture the long-haul market. CEO Pieter Elbers' ambition to make IndiGo a global airline by 2030 means taking on Air India, which itself is in the middle of a five-year transformation.

IndiGo plans to break Air India's dominance of long-haul routes with its order for wide-body A321 XLRs and A350s. The first of the A350s (30 ordered) is set to be delivered by FY28 and will allow it to fly to North America. A321 XLRs, expected in FY26, will give it the option to fly non-stop to the UK, the second-largest international market for Air India after the US.
