WHILE THE WORLD combats tremendous volatility, the Indian economy remains relatively better-placed than other emerging markets and global economies, but is not entirely insulated from the impact of global headwinds. The health of the financial system remains robust, and it is well-capitalised, showing improvement in asset quality and balance sheets, with banks returning to profitability. In this transformational journey, India's banking sector is undergoing continual change as it seeks to maintain sustainable growth and address gaps.

Against this backdrop, the *Business Today* Banking & Economy Summit brought together policymakers and regulators, senior executives of the banking and financial services sector, fintech companies, big tech companies, aggregators etc. to discuss some of the key trends and issues related to the evolving business and operating environment in the industry. At the event, banks and NBFCs that successfully navigated the choppy waters were felicitated as part of the *BT* Best Banks Awards.
