

VACHERON CONSTANTIN Les Cabinotiers—The Berkley Grand Complication

Vacheron Constantin has created a pocket watch, which is the world's most complicated timepiece, comprising 63 horological complications and 2,877 components. Created on special order, this unique piece has achieved the impossible—creating a genuine Chinese perpetual calendar until 2200. This is a horological feat, given the peculiarities of the lunisolar calendar, which is characterised by a complex and irregular cycle. It was under development for 11 years, including one year devoted only to assembling the various components.
