

Our next big focus is bringing more people onto the blockchain itself. This will allow them to truly experience the full potential of Web3 technology. We see a huge gap between the current number of crypto investors, which is around 400 million globally, and the much smaller number who are actively using blockchain for transactions, which is only around 15 million. A complex user experience is one of the biggest barriers to wider adoption. We're committed to solving this problem and making blockchain technology accessible to everyone.

Q Can you talk more about the technological solution that you are working on?

Neeraj Khandelwal: We recognize that to fully realize the benefits of Web3, we need to improve the user experience. Currently, the Web3 ecosystem is quite fragmented, which makes using Web3 apps a cumbersome process. Users have to navigate through complex wallet setups and manage transactions across multiple chain ecosystems.

We are offering a solution by introducing a fully expressive orchestration layer that can support thousands of chains in future. This Orchestration layer called 'Okto Chain' abstracts complexities, offering a unified platform for building next-generation applications on top of existing web3 rails. We'll give developers easy tools to make their apps work smoothly. Web 2 app developers can leverage their existing skills to seamlessly integrate web3 functionalities into their applications.

Our goal is to make Web3 feel more like regular internet browsing—easy to use and understand, even if there's a lot going on behind the scenes.

Sumit Gupta: CoinDCX is proud to be building in India, for the World. Our mission has always been to democratize access to crypto and Web3 technologies, ensuring that everyone, regardless of their background or location, can participate in the digital economy. This initiative marks a significant milestone, as it's the first time an exchange in India, and indeed one of the few globally, is introducing a chain that adds this level of value for developers, ultimately benefiting investors worldwide.

Q When user experience is solved, how will it benefit a regular investor?

Neeraj Khandelwal: Regular investors can take advantage of options like DeFi Swap, DeFi Futures, NFTs, GameFi, Identity, DeFi Options, and more emerging use cases in the ecosystem. Previously accessible mainly to crypto-native investors, these opportunities offer broader access to potential returns and diversification.

Q Talking about Fintech apps, compliance has been in conversations. Crypto is an emerging sector, how have you managed to keep up with it?

Neeraj Khandelwal: In 2020, we laid the groundwork for our compliance team, choosing the harder road for integrity and doing the right thing. Building a compliant product was tough,

but our team anticipated and adapted.

In 2022, unprecedented challenges arose with new tax laws. We adapted, recognizing the importance of complying with these regulations. We partnered with KoinX to simplify tax filing for our users. Similarly, when the government of India required crypto exchanges to operate in compliance with regulations like the Prevention of Money Laundering Act (PMLA), CoinDCX became the first exchange registered with FIU-IND in April 2023.

We have always chosen the harder road for compliance because we believe that if you want to win the trust of your users, it is the minimum thing to do. This is how we can facilitate investors with a transparent and trustworthy ecosystem.

Q What is it that makes you proud of CoinDCX?

Sumit Gupta: The love and support of our incredible community for CoinDCX is something that we are proud of. Today, CoinDCX is a known name globally and the preferred partner for global blockchain and Web3 companies entering the Indian market.

Whether it's the Solana Foundation and Superteam announcing a ₹25 Crore grant program for Indian Web3 developers in partnership with CoinDCX or global protocols like Avalanche, SUI, etc., choosing to be part of our hackathon organized on the sidelines of Unfold 2023, we are an ideal collaborator for global blockchain and Web3 companies.

Q What do you see as the future of CoinDCX and the broader crypto and Web3 industry?

Sumit Gupta: The future of CoinDCX is bright, and the same can be said for the broader crypto and Web3 industry. With increasing institutional interest, regulatory clarity, and technological advancements, we're witnessing a paradigm shift in how people perceive and interact with digital assets. As pioneers in the space, CoinDCX is well-positioned to capitalize on these opportunities and drive further innovation and adoption.

Neeraj Khandelwal: We're excited about the possibilities that lie ahead and remain committed to our vision of building a more inclusive and decentralized financial ecosystem. We will continue to push the boundaries of what's possible in Web3.
