

International Solar Alliance. In the past 10 years, we have tirelessly worked on mitigation, adaptation, and climate action programmes.

Q: There is a continued dependence on the West for climate finance and technology. What is your view?

A: Firstly, our civilization is an energy-based one. From railways to rockets, from factory production to agriculture, our entire life is based on energy. But the energy that we consume leads to carbon emissions. Be it our vehicles, industry, or refrigerator, ultimately they are all connected to us and emit pollutants. In such a situation, whoever invents the technology

“I would like to say this to the private sector: don’t just be transparent, be honest. Build trust. Everyone should trust each other and their accounts too. Where there is trust there is truth”
