

THINGS TO KNOW

WHAT ARE GCCs?

Global capability centres (GCCs) are offshore units of MNCs providing support services, including IT, finance, HR, R&D, analytics, and more. They operate as extensions of the parent firm, offering high-end capabilities rather than just back-office functions.

WHAT KIND OF WORK DO GCCs HANDLE?

GCCs today manage everything from cloud computing, data engineering, digital transformation, and AI development to global finance operations, product design, and R&D.

HOW ARE GCCs DIFFERENT FROM BPOs?

While BPOs focus on transactional tasks and cost arbitrage, GCCs deliver strategic, value-added services such as product design, innovation, cybersecurity and AI/ML solutions, often aligned with the company's core business goals.

WHAT DO GCCs CONTRIBUTE TO INDIA'S ECONOMY?

GCCs contribute over \$50 billion in revenue to the economy annually and are expected to cross \$100 billion by 2030. They also create high-quality jobs, promote innovation and boost local ecosystems.

roduction of a national guidance framework to help states attract and promote GCCs, strengthening India's position as a global business hub. Given India's rising economic influence, this move is expected to fuel office space demand beyond the major metros to Tier II and Tier III cities as well."

ANSWER TO UNEMPLOYMENT?

The growth of GCCs in India is expected to have a transformative impact on India's job market. Industry estimates suggest that GCCs could create more than two million additional jobs in India over the next five years across diverse roles, including data science, cybersecurity, design thinking, AI/ML (artificial engineering/machine learning) engineering, and finance, among others.

This becomes crucial at a time when India's labour force is undergoing a critical shift. Automation and AI are reshaping industries, and new graduates are struggling to keep up. Mercer-Mettl's India Graduate Skill Index 2025 report found that just 42.6% of graduates were employable, down from 44.3% in 2023.

Underlying all this is a growing imbalance between graduate capability and business demand. Technical skills in areas like AI and data science are highly sought after, but many graduates also lack the key soft skills such as communication, problem-solving and creativity. This imbalance is making job opportunities more elusive for the new entrants.

The rapid expansion of GCCs in India offers a potential solution by creating high-skill job opportunities and incentivising targeted
