SOME COMPANIES THAT HAVE OPENED GCCs BEYOND TIER I CITIES INCLUDE COGNIZANT AND INFINTX HEALTHCARE

upskilling aligned with industry needs. “While AI offers significant growth opportunities, it also brings the risk of job displacement. To mitigate this, rapid and continuous reskilling will be essential to shift talent from repetitive tasks to more cognitive and strategic roles,” says Milind Shah, Managing Director-India, Randstad Digital.

The skill index report further found that graduates from Tier I colleges have the highest employability at 48.4%, followed by Tier II (46.1%) and Tier III (43.4%) institutions. That, along with cost advantages, is perhaps why GCCs are focusing on Tier II and Tier III cities. This makes GCCs an impor-

tant lever not just for white-collar employment but also for inclusive and geographically balanced economic development.

BEYOND THE METROS

New cities, beyond the traditional metro centres such as Bengaluru and Hyderabad, are emerging as GCC talent hubs. Shah of Randstad Digital says Coimbatore, Pune, Jaipur, Indore, Surat, Lucknow, Visakhapatnam, Chandigarh, Nagpur, Ahmedabad, Madurai, Kochi and Bhubaneswar are attracting GCC investments due to availability of high-quality engineering talent, lower real estate and living costs and enhanced connectivity

and digital infrastructure.

“As global firms seek to de-risk from over-concentration in primary cities, these emerging hubs are poised to play a critical role in decentralising innovation and driving the next phase of India’s digital growth story,” he adds.

Some of the companies that have of late opened their GCCs beyond Tier 1 cities include Cognizant and Infintx Healthcare. The former inaugurated a 60,000 sq ft TechFin centre at GIFT City, Gandhinagar, in May this year. The facility focuses on digital engineering, AI, cybersecurity and analytics, with plans to expand its workforce to 2,000 over the next three years. Last year, Infintx Healthcare opened a delivery centre in Madurai to support US-based clients. The facility aims to create 700 jobs over the next five years.

The India GCC Landscape report by tech industry body Nasscom in collaboration with management consulting firm Zinnov highlighted that Tier II and Tier III
